

Document Title	Specification of Module XCP	
Document Owner	AUTOSAR	
Document Responsibility	AUTOSAR	
Document Identification No	412	
Document Classification	Standard	
Document Status	Final	
Part of AUTOSAR Standard	Classic Platform	
Part of Standard Release	4.3.0	

Document Change History				
Date	Release	e Changed by Change Description		
2016-11-30	4.3.0	AUTOSAR Release Management	 Editorial corrections. Harmonize descriptions of identical API functions. Removal of unused artifacts and obsolete elements. 	
2015-07-31	4.2.2	AUTOSAR Release Management	 Debugging support marked as obsolete Editorial corrections. Modifications in some parameters multiplicity of XcpDaqlist container. 	
2014-10-31	4.2.1	AUTOSAR Release Management	 Editorial corrections. Minor corrections. Changed the multiplicity of XcpEventChannelTriggeredDaqList Ref. Remove limitation "Flash Programming for ECU development purposes". 	
2014-03-31	4.1.3	AUTOSAR Release Management	 Editorial correction for faulty references links. Minor editorial correction for SWS_Xcp_00841, SWS_Xcp_00844. Changed Xcp_RxIndication argument from PduInfoType* to const PduInfoType*. 	
2013-10-31	4.1.2	AUTOSAR Release Management	 Minor corrections Editorial changes Removed chapter(s) on change documentation 	

Document Change History				
Date	Release	Changed by	anged by Change Description	
2013-03-15	4.1.1	AUTOSAR Administration	 Reclassify XCP_E_INIT_FAILED from class production error to 	
			development	
2013-03-15	4.1.1	AUTOSAR Administration	 Added parameters for Event Channel and Timestamp configuration Added possibility to calculate memory consumption for ODT (DAQ & STIM) Restructuring configuration parameters for static & dynamic ODT Added support for deactivation of transmission capabilities 	
2011-12-22	4.0.3	AUTOSAR Administration	 Add chapter 7.8 (Version check), RTE limitation, OS Counter Ref Remove InstanceID and known limitation (OS) 	
2010-09-30	3.1.5	AUTOSAR Administration	Initial Release	

Disclaimer

This specification and the material contained in it, as released by AUTOSAR, is for the purpose of information only. AUTOSAR and the companies that have contributed to it shall not be liable for any use of the specification.

The material contained in this specification is protected by copyright and other types of Intellectual Property Rights. The commercial exploitation of the material contained in this specification requires a license to such Intellectual Property Rights.

This specification may be utilized or reproduced without any modification, in any form or by any means, for informational purposes only. For any other purpose, no part of the specification may be utilized or reproduced, in any form or by any means, without permission in writing from the publisher.

The AUTOSAR specifications have been developed for automotive applications only. They have neither been developed, nor tested for non-automotive applications.

The word AUTOSAR and the AUTOSAR logo are registered trademarks.

Advice for users

AUTOSAR specifications may contain exemplary items (exemplary reference models, "use cases", and/or references to exemplary technical solutions, devices, processes or software).

Any such exemplary items are contained in the specifications for illustration purposes only, and they themselves are not part of the AUTOSAR Standard. Neither their presence in such specifications, nor any later documentation of AUTOSAR conformance of products actually implementing such exemplary items, imply that intellectual property rights covering such exemplary items are licensed under the same rules as applicable to the AUTOSAR Standard.

1 Introduction and functional overview

This specification specifies the functionality, API and the configuration of the AUTOSAR Basic Software module XCP

XCP is a protocol description (ASAM standard) between a master (tool) and a slave (device), which provides the following basic features:

- Synchronous data acquisition (measurement)
- Synchronous data stimulation (for rapid prototyping)
- Online memory calibration (read / write access)
- Calibration data page initialization and switching
- Flash Programming for ECU development purposes
- Every feature is optional and the access can be restricted
- Various communications busses are supported

XCP was designed according to the following principles:

- Minimal Slave resource consumption (RAM, ROM, runtime)
- Efficient communication
- Simple Slave implementation

2 Acronyms and abbreviations

Acronym:	Description:	
AUTOSAR	AUTomotive Open System ARchitecture	
A2L	File Extension for an ASAM 2MC Language File	
ASAM	Association for Standardization of Automation and Measuring	
	Systems	
BSW	Basic Software	
CAN	Controller Area Network	
Canlf	CAN Interface	
CTO	Command Transfer Object	
DAQ	Data AcQuisition, Data AcQuisition Packet	
DTO	Data Transfer Object	
ECU	Electronic Control Unit	
Frlf	FlexRay Interface	
HIS	Hersteller Initiative Software	
LPDU	Data Link Layer PDU	
MCD	Measurement Calibration and Diagnostics	
MISRA	Motor Industry Software Reliability Association	
ODT	Object Descriptor Table	
PDU	Protocol Data Unit	
RAM	Random Access Memory	
ROM	Read Only Memory	
SchM	Schedule Manager	
SVN	Subversion	
SRS	Software Requirements Specification	
STIM	Data Stim ulation packet	
SW	S oftware	
SWS	Software Specification	
TCP/IP	Transfer Control Protocol / Internet Protocol	
TS	Time Stamp	
UDP/IP	User Datagram Protocol / Internet Protocol	
URL	Uniform Resource Locator	
XCP	Universal Calibration Protocol	
XML	Extensible Markup Language	
ISR	Interrupt Service Routine	
DET	Default Error Tracer (AUTOSAR BSW module)

3.2 Related specification

AUTOSAR provides a General Specification on Basic Software modules [12] (SWS BSW General), which is also valid for XCP.

Thus, the specification SWS BSW General shall be considered as additional and required specification for XCP.

4 Constraints and assumptions

4.1 Limitations

The following XCP features are currently out of scope:

- The SET_DAQ_ID command according to the XCP CAN Transport Layer Specification is not part of the AUTOSAE XCP module"
- Currently, the AUTOSAR RTE does not offer APIs for direct communication with XCP
- For further details concerning the supported feature set, please refer to [13]
- NAX is only configurable through the ASAM configuration file A2L.

Please note:

For the communications bus LIN, no ASAM XCP is specified.

4.2 Applicability to car domains

n/a

5 Dependencies to other modules

This section describes the relations to other modules and files within the AUTOSAR basic software architecture. It contains brief descriptions of configuration information and services, which are required by the XCP module from other modules.

5.1 AUTOSAR RTE (BSW Scheduler)

The BSW Scheduler calls the main functions of the Xcp, which are necessary for the cyclic processes of the Xcp.

5.2 AUTOSAR FlexRay Interface

The FlexRay Interface is used to transmit and receive XCP PDUs via FlexRay.

5.3 AUTOSAR CAN Interface

The CAN Interface is used to transmit and receive XCP PDUs via CAN.

5.4 AUTOSAR SocketAdaptor

The SocketAdaptor is used to transmit and receive XCP PDUs via Ethernet.

5.5 AUTOSAR RTE

The RTE is used for copying calibration parameters from ROM/FLASH to RAM and to use the double pointered method

5.6 AUTOSAR OS

In order to be able to use the time stamped feature of XCP, an AUTOSAR OS Counter is used.

5.7 AUTOSAR Diagnostic Event Manager

In order to be able to report production errors, the XCP has to have access to the Diagnostic Event Manager.

5.8 AUTOSAR Default Error Tracer

In order to be able to report default errors, the XCP has to have access to the error hook of the Default Error Tracer.

5.9 File structure

5.9.1 Code file structure

[SWS_Xcp_00501]

[The code file structure shall not be defined within this specification completely. At this point it shall be pointed out that the code-file structure shall include the following files named:

- Xcp.c general source code file of the module XCP
- Xcp_Cfg.c for pre-compile time configurable parameters
- Xcp_Lcfg.c for link time configurable parameters and
- Xcp_PBcfg.c for post build time configurable parameters. J (SRS_BSW_00419, SRS_BSW_00383, SRS_BSW_00346, SRS_BSW_00158)

These files shall contain all link time and post-build time configurable parameters.

[SWS_Xcp_00500]

[The module XCP shall access the location of the API of all used modules for precompile time configuration by either using of external declaration in includes of the used modules' public header files < x > .h or by the code file $x \in Cfg.c.$] ()

5.9.2 Header file structure

[SWS_Xcp_00502] [

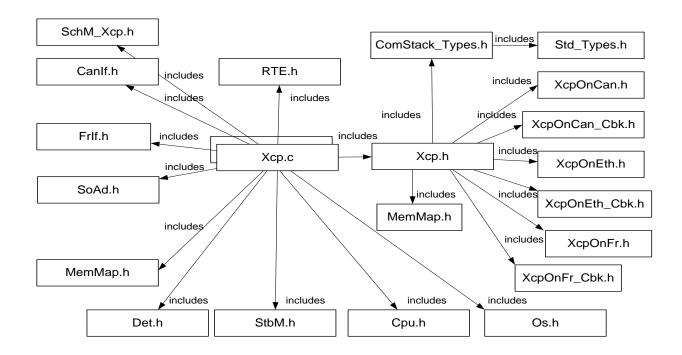

Figure 1: XCP Header File Structure

(SRS BSW 00381, SRS BSW 00412, SRS BSW 00409, SRS BSW 00301)

[SWS_Xcp_00505]

The implementation of the XCP module shall provide the header file Xcp.h, which is

the main module interface file. It shall contain all types and function prototypes required by the XCP module's environment. (SRS_BSW_00302)

[SWS Xcp 00506]

[The implementation of the XCP on CAN module shall provide the header file $XcpOnCan_Cfg.h$ that shall contain the pre-compile-time configuration parameters.] ()

[SWS_Xcp_00507] [

The implementation of the XCP on FlexRay module shall provide the header file $\texttt{XcpOnFr_Cfg.h}$ that shall contain the pre-compile-time configuration parameters.] ()

[SWS_Xcp_00508] [

The implementation of the XCP on Ethernet module shall provide the header file $XcpOnEth_Cfg.h$ that shall contain the pre-compile-time configuration parameters.] ()

6 Requirements traceability

Requirement	Description	Satisfied by
SRS_BSW_00003	All software modules shall provide version and identification information	SWS_Xcp_00807
SRS_BSW_00005	Modules of the μC Abstraction Layer (MCAL) may not have hard coded horizontal interfaces	SWS_Xcp_00999
SRS_BSW_00006	The source code of software modules above the μ C Abstraction Layer (MCAL) shall not be processor and compiler dependent.	SWS_Xcp_00999
SRS_BSW_00009	All Basic SW Modules shall be documented according to a common standard.	SWS_Xcp_00999
SRS_BSW_00010	The memory consumption of all Basic SW Modules shall be documented for a defined configuration for all supported platforms.	SWS_Xcp_00999
SRS_BSW_00101	The Basic Software Module shall be able to initialize variables and hardware in a separate initialization function	SWS_Xcp_00803
SRS_BSW_00158	All modules of the AUTOSAR Basic Software shall strictly separate configuration from implementation	SWS_Xcp_00501
SRS_BSW_00159	All modules of the AUTOSAR Basic Software shall support a tool based configuration	SWS_Xcp_00102
SRS_BSW_00161	The AUTOSAR Basic Software shall provide a microcontroller abstraction layer which provides a standardized interface to higher software layers	SWS_Xcp_00999
SRS_BSW_00162	The AUTOSAR Basic Software shall provide a hardware abstraction layer	SWS_Xcp_00999
SRS_BSW_00164	The Implementation of interrupt service routines shall be done by the Operating System, complex drivers or modules	SWS_Xcp_00999
SRS_BSW_00167	All AUTOSAR Basic Software Modules shall provide configuration rules and constraints to enable plausibility checks	SWS_Xcp_00103, SWS_Xcp_00104, SWS_Xcp_00105
SRS_BSW_00168	SW components shall be tested by a function defined in a common API in the Basis-SW	SWS_Xcp_00999
SRS_BSW_00170	The AUTOSAR SW Components shall provide information about their dependency from faults, signal qualities, driver demands	SWS_Xcp_00999
SRS_BSW_00171	Optional functionality of a Basic-SW component that is not required in the ECU shall be configurable at pre-compile-time	SWS_Xcp_00999
SRS_BSW_00172	The scheduling strategy that is built inside the Basic Software Modules shall be compatible with the strategy used in the system	SWS_Xcp_00999
SRS_BSW_00301	All AUTOSAR Basic Software Modules shall only import the necessary information	SWS_Xcp_00502
SRS_BSW_00302	All AUTOSAR Basic Software Modules shall	SWS_Xcp_00505

	only export information needed by other modules	
SRS_BSW_00306	AUTOSAR Basic Software Modules shall be compiler and platform independent	SWS_Xcp_00999
SRS_BSW_00309	All AUTOSAR Basic Software Modules shall indicate all global data with read-only purposes by explicitly assigning the const keyword	SWS_Xcp_00999
SRS_BSW_00312	Shared code shall be reentrant	SWS_Xcp_00999
SRS_BSW_00314	All internal driver modules shall separate the interrupt frame definition from the service routine	SWS_Xcp_00999
SRS_BSW_00318	Each AUTOSAR Basic Software Module file shall provide version numbers in the header file	SWS_Xcp_00807
SRS_BSW_00321	The version numbers of AUTOSAR Basic Software Modules shall be enumerated according specific rules	SWS_Xcp_00999
SRS_BSW_00325	The runtime of interrupt service routines and functions that are running in interrupt context shall be kept short	SWS_Xcp_00999
SRS_BSW_00327	Error values naming convention	SWS_Xcp_00763
SRS_BSW_00328	All AUTOSAR Basic Software Modules shall avoid the duplication of code	SWS_Xcp_00999
SRS_BSW_00330	It shall be allowed to use macros instead of functions where source code is used and runtime is critical	SWS_Xcp_00999
SRS_BSW_00331	All Basic Software Modules shall strictly separate error and status information	SWS_Xcp_00999
SRS_BSW_00333	For each callback function it shall be specified if it is called from interrupt context or not	SWS_Xcp_00999
SRS_BSW_00335	Status values naming convention	SWS_Xcp_00999
SRS_BSW_00336	Basic SW module shall be able to shutdown	SWS_Xcp_00999
SRS_BSW_00341	Module documentation shall contains all needed informations	SWS_Xcp_00999
SRS_BSW_00344	BSW Modules shall support link-time configuration	SWS_Xcp_00741
SRS_BSW_00345	BSW Modules shall support pre-compile configuration	SWS_Xcp_00742
SRS_BSW_00346	All AUTOSAR Basic Software Modules shall provide at least a basic set of module files	SWS_Xcp_00501
SRS_BSW_00347	A Naming seperation of different instances of BSW drivers shall be in place	SWS_Xcp_00999
SRS_BSW_00358	The return type of init() functions implemented by AUTOSAR Basic Software Modules shall be void	SWS_Xcp_00803
SRS_BSW_00360	AUTOSAR Basic Software Modules callback functions are allowed to have parameters	SWS_Xcp_00999
SRS_BSW_00371	The passing of function pointers as API parameter is forbidden for all AUTOSAR Basic Software Modules	SWS_Xcp_00999

SRS_BSW_00373	The main processing function of each AUTOSAR Basic Software Module shall be named according the defined convention	SWS_Xcp_00823
SRS_BSW_00374	All Basic Software Modules shall provide a readable module vendor identification	SWS_Xcp_00807
SRS_BSW_00375	Basic Software Modules shall report wake-up reasons	SWS_Xcp_00999
SRS_BSW_00377	A Basic Software Module can return a module specific types	SWS_Xcp_00999
SRS_BSW_00379	All software modules shall provide a module identifier in the header file and in the module XML description file.	SWS_Xcp_00807
SRS_BSW_00381	The pre-compile time parameters shall be placed into a separate configuration header file	SWS_Xcp_00502
SRS_BSW_00383	The Basic Software Module specifications shall specify which other configuration files from other modules they use at least in the description	SWS_Xcp_00501
SRS_BSW_00401	Documentation of multiple instances of configuration parameters shall be available	SWS_Xcp_00999
SRS_BSW_00402	Each module shall provide version information	SWS_Xcp_00807
SRS_BSW_00404	BSW Modules shall support post-build configuration	SWS_Xcp_00742
SRS_BSW_00405	BSW Modules shall support multiple configuration sets	SWS_Xcp_00803
SRS_BSW_00407	Each BSW module shall provide a function to read out the version information of a dedicated module implementation	SWS_Xcp_00807
SRS_BSW_00409	All production code error ID symbols are defined by the Dem module and shall be retrieved by the other BSW modules from Dem configuration	SWS_Xcp_00502
SRS_BSW_00410	Compiler switches shall have defined values	SWS_Xcp_00999
SRS_BSW_00411	All AUTOSAR Basic Software Modules shall apply a naming rule for enabling/disabling the existence of the API	SWS_Xcp_00807
SRS_BSW_00412	References to c-configuration parameters shall be placed into a separate h-file	SWS_Xcp_00502
SRS_BSW_00413	An index-based accessing of the instances of BSW modules shall be done	SWS_Xcp_00999
SRS_BSW_00414	Init functions shall have a pointer to a configuration structure as single parameter	SWS_Xcp_00803
SRS_BSW_00415	Interfaces which are provided exclusively for one module shall be separated into a dedicated header file	SWS_Xcp_00999
SRS_BSW_00416	The sequence of modules to be initialized shall be configurable	SWS_Xcp_00999
SRS_BSW_00417	Software which is not part of the SW-C shall report error events only after the DEM is fully operational.	SWS_Xcp_00999
SRS_BSW_00419	If a pre-compile time configuration parameter is	SWS_Xcp_00501

	implemented as "const" it should be placed into a separate c-file	
SRS_BSW_00423	BSW modules with AUTOSAR interfaces shall be describable with the means of the SW-C Template	SWS_Xcp_00999
SRS_BSW_00424	BSW module main processing functions shall not be allowed to enter a wait state	SWS_Xcp_00823
SRS_BSW_00425	The BSW module description template shall provide means to model the defined trigger conditions of schedulable objects	SWS_Xcp_00999
SRS_BSW_00426	BSW Modules shall ensure data consistency of data which is shared between BSW modules	SWS_Xcp_00999
SRS_BSW_00427	ISR functions shall be defined and documented in the BSW module description template	SWS_Xcp_00999
SRS_BSW_00428	A BSW module shall state if its main processing function(s) has to be executed in a specific order or sequence	SWS_Xcp_00999
SRS_BSW_00432	Modules should have separate main processing functions for read/receive and write/transmit data path	SWS_Xcp_00999
SRS_BSW_00433	Main processing functions are only allowed to be called from task bodies provided by the BSW Scheduler	SWS_Xcp_00823
SRS_Xcp_29001	The AUTOSAR XCP module shall be located above the bus interfaces / Socket Adaptor	SWS_Xcp_00701
SRS_Xcp_29002	The AUTOSAR XCP shall make use of the data transmit- and receive APIs of the Bus Interfaces	SWS_Xcp_00712, SWS_Xcp_00714, SWS_Xcp_00720, SWS_Xcp_00734
SRS_Xcp_29003	The AUTOSAR XCP messages shall be identified by unique PDU-IDs	SWS_Xcp_00702
SRS_Xcp_29004	The XCP Specification Version 1.1 shall be used	SWS_Xcp_00703
SRS_Xcp_29005	XCP on CAN shall be supported	SWS_Xcp_00713
SRS_Xcp_29006	XCP on FlexRay shall be supported	SWS_Xcp_00719
SRS_Xcp_29007	XCP on Ethernet shall be supported	SWS_Xcp_00733
SRS_Xcp_29008	The code generator of the XCP Module shall generate the A2L IF_DATA section	SWS_Xcp_00853, SWS_Xcp_00999
SRS_Xcp_29009	The slave shall transfer the contents of the elements defined in each ODT of the DAQ-list to the master	SWS_Xcp_00705
SRS_Xcp_29010	Synchronous Data Stimulation shall be the inverse mode of Synchronous Data Acquisition	SWS_Xcp_00707
SRS_Xcp_29012	The XCP master shall already send the next request before having received the response on the previous request	SWS_Xcp_00710
SRS_Xcp_29013	It shall be possible to configure the DAQ Lists dynamically	SWS_Xcp_00706
SRS_Xcp_29014	It shall be possible to transmit a timestamp within the XCP packet	SWS_Xcp_00709

SRS_Xcp_29015	It shall be possible to bypass data by making use of Synchronous Data Acquisition and Synchronous Data Stimulation simultaneously	SWS_Xcp_00761
SRS_Xcp_29016	The feature "Seed&Key" shall be used for protection handling purpose	SWS_Xcp_00766
SRS_Xcp_29017	The AUTOSAR XCP module shall implement an interface for initialization.	SWS_Xcp_00803
SRS_Xcp_29018	Page switching shall be supported	SWS_Xcp_00852
SRS_Xcp_29019	DAQ configuration storing with power-up data transfer (RESUME mode) shall be supported	SWS_Xcp_00854
SRS_Xcp_29020	Flash Programming for ECU development purposes	SWS_Xcp_00855, SWS_Xcp_00856

7 Functional specification

The specification of the module XCP shall define all parameters and interfaces, which are required to use the ASAM XCP protocol specification within an AUTOSAR environment.

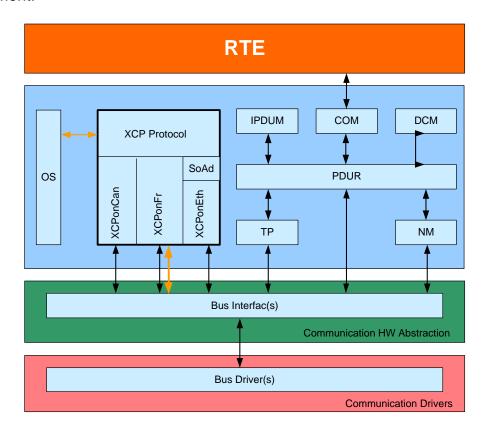

Figure 2: Description

Black arrows: Data Path (Signals/Pdus)
Orange arrows: Control Path (FlexRay Interface)

[SWS_Xcp_00701][

The AUTOSAR XCP Module be located above the bus specific Interfaces in case of FlexRay and Can. In case of Ethernet, the AUTOSAR XCP module shall be located above the Socket Adaptor. (SRS_Xcp_29001)

[SWS_Xcp_00702][

For transmitting and receiving of XCP messages, unique PDU-IDs shall be used. J (SRS_Xcp_29003)

[SWS_Xcp_00703][

The AUTOSAR XCP Module shall support the ASAM XCP Specification Version 1.1. (SRS_Xcp_29004)

[SWS Xcp 00705][

The AUTOSAR XCP Module shall support the basic feature "Synchronous data acquisition (measurement)". Please refer to [13] (SRS_Xcp_29009)

The AUTOSAR XCP Module shall support the feature "Dynamic DAQ Configuration". according to [13] (SRS_Xcp_29013)

[SWS Xcp 00707]

[The AUTOSAR XCP Module shall support the basic feature "Synchronous data stimulation" according to [13] (SRS_Xcp_29010)

[SWS Xcp 00708][

The AUTOSAR XCP Module shall support the basic feature "Online memory calibration (read / write access) ", according to [13]| ()

[SWS Xcp 00709][

The AUTOSAR XCP Module shall support the feature "Timestamped Data Transfer", according to [13]| (SRS_Xcp_29014)

[SWS_Xcp_00768][

The ECU local time shall be derived from the AUTOSAR OS.| ()

[SWS_Xcp_00711][

The AUTOSAR XCP Module shall support the feature "Block communication mode", according to [13]| ()

[SWS_Xcp_00761][

The AUTOSAR XCP Module shall support the feature "Bypassing", according to [13] | (SRS_Xcp_29015)

[SWS Xcp 00766][

The AUTOSAR XCP Module shall support the feature "Seed & Key" according to [13] (SRS_Xcp_29016)

[SWS Xcp 00712][

For sending and receiving of calibration data, the sending and receiving APIs specified within the AUTOSAR BSW Bus Interfaces (FlexRay Interface, CAN Interface, TCP/IP Socket Adaptor) shall be used. Please refer to chapter 7.1, 7.2 and 7.3.] (SRS_Xcp_29002)

[SWS_Xcp_00852][The AUTOSAR XCP Module shall support the feature "Page switching", according to [13]|(SRS_Xcp_29018)

[SWS_Xcp_00853][The code generator of the XCP Module shall generate the A2L IF_DATA section, based on the configuration of XCP](SRS_Xcp_29008)

[SWS_Xcp_00854][The AUTOSAR XCP Module shall support the feature "Power-Up data transfer (RESUME MODE)", according to [13]|(SRS_Xcp_29019)

[SWS_Xcp_00855] [The AUTOSAR XCP Module shall support the flash programming (PGM) according to [13] (SRS_Xcp_29020)

[SWS_Xcp_00856][Indication the end of a programming sequence is supported using the optional command "PROGRAM_RESET", where the slave will go to disconnected state but without forcing a device reset J (SRS_Xcp_29020)

[SWS_Xcp_00859][The XCP module shall wait for the Xcp_<Lo>TxConfirmation (positive or negative) after each call to <Lo>_Transmit to avoid overwriting previously transmitted data] ()

7.1 XCP on CAN

[SWS_Xcp_00713][

The AUTOSAR XCP Module shall support the CAN communications bus according to [14] (SRS_Xcp_29005)

[SWS_Xcp_00714]

[XCP data sent and received via CAN, the PDUs have to be transmitted and received using the transmitting and receive APIs provided by the AUTOSAR CAN Interface, according to [8] (SRS_Xcp_29002)

[SWS_Xcp_00715][

For sending and receiving XCP data via CAN, at least two different CAN identifiers have to be configured to be used by XCP. ()

[SWS_Xcp_00716][

Performance information shall be exchanged between the XCP master and XCP slave using the parameters according to [14] ()

[SWS_Xcp_00718][

The XCP Module shall support the GET SLAVE ID command according to [14] ()

7.2 XCP on FlexRay

[SWS_Xcp_00719][

The AUTOSAR XCP Module shall support the FlexRay communications bus according to [16] (SRS_Xcp_29006)

[SWS Xcp 00720][

XCP data sent and received via FlexRay, the PDUs have to be transmitted and received using the transmit and receive APIs provided by the AUTOSAR FlexRay Interface according to [7]. | (SRS_Xcp_29002)

[SWS Xcp 00721][

All XCP on FlexRay LPDUs always are event driven. Please refer to Chapter 1.1.2 "FlexRay Frame Type" of [16]| ()

[SWS_Xcp_00722][

The hardware buffers (of the FlexRay Communication Controller) XCP uses for data transmission and reception are assigned exclusively to the XCP module. ()

Note:

This restriction prevents disturbances of ongoing FlexRay communication.

[SWS_Xcp_00723][

The usage of FlexRay Communication Controller's hardware buffers shall be configured by the corresponding parameters according to [16] ()

[SWS_Xcp_00724][

The FlexRay PDU length used by the AUTOSAR XCP module shall be set using the corresponding parameters according to [16]| ()

[SWS Xcp 00725][

LPDU_IDs which shall be routed to the AUTOSAR XCP module (using the AUTOSAR Bus Interface) have to be defined by the system designer. | ()

[SWS_Xcp_00726][

The ASAM MCD 2MC description file (i.e. A2L file) describes to which extent the XCP-dedicated buffers of a specific slave can be configured for XCP communication. | ()

[SWS Xcp 00728][

The XCP master gets the information about the XCP dedicated FlexRay Communication Controller buffers from the ASAM MCD 2MC description file. | ()

[SWS Xcp 00729][

Limitations due to the usage of multiple XCP slaves on the FlexRay communications bus shall be taken into consideration by the system designer. Please refer to [16].| ()

[SWS Xcp 00730][

Depending upon the requirements on sequencing correctness, alignment and net data throughput, different header types are possible. Please refer to Chapter 1.4.1 "Header" of [16]| ()

[SWS_Xcp_00731]

[For XCP on FlexRay, the Tail consists of a Control Field containing optional FILL bytes according to [16].] ()

[SWS Xcp 00732][

The AUTOSAR XCP module shall be able to pack multiple XCP messages into one FlexRay Frame according to [16].| ()

7.3 XCP on Ethernet

[SWS_Xcp_00733][

The AUTOSAR XCP Module shall support the Ethernet communications bus according to [15] (SRS_Xcp_29007)

[SWS_Xcp_00734][

XCP data sent and received via Ethernet, the PDUs have to be transmitted and received using the transmitting and receive APIs provided by the AUTOSAR Socket Adaptor according to [9]. (SRS Xcp 29002)

[SWS_Xcp_00735][

The AUTOSAR XCP slave connected by Ethernet and TCP/IP or UDP/IP is addressed by its IP Address and Port number. | ()

[SWS_Xcp_00736][

The AUTOSAR XCP slave only accepts one connection at the time. | ()

[SWS_Xcp_00737][

If the socket is closed while in XCP connected state, the slave device will perform an XCP disconnect, which means that all data acquisition will be stopped. ()

[SWS_Xcp_00738][

The addressing scheme is defined according to [15] ()

[SWS_Xcp_00739][

The header and tail of an XCP on Ethernet message have to be set according to [15] ()

[SWS Xcp 00740][

The upper performance limit depends on the protocol stack of the host system. The corresponding parameters defined according to [15] have to be set. | ()

[SWS_Xcp_00710][

The AUTOSAR XCP Module shall support the feature "Interleaved communication mode", according to according to [13]] (SRS Xcp 29012)

7.4 General Requirements

[SWS Xcp 00741][

Link-time and post-build-time configuration data shall be implemented as read-only data structures. Link-time configuration data shall be immediately referenced by the implementation, the start-address of post-build-time configuration data shall be passed during module initialization (SRS_BSW_00344)

[SWS_Xcp_00742]

[The XCP module shall support pre-compile time, link-time and post-build-time configuration.] (SRS_BSW_00404, SRS_BSW_00345)

7.5 Error classification

[SWS_Xcp_00763]

[The error values and EventIds are named in capital letters according to the scheme

XCP_E_<NAME>, where NAME describes the error/EventId and may consist of several words separated by underscores. (SRS_BSW_00327)

7.5.1 Development Errors

[SWS_Xcp_00857]

[Development Error Types] ()

Type or error	Relevance	Related error code	Value [hex]
Invalid pointer	Development	XCP_E_INV_POINTER	0x01
Module not initialized	Development	XCP_E_NOT_INITIALIZED	0x02
Initialization of XCP failed	Development	XCP_E_INIT_FAILED	0x04
Null pointer has been	Development	XCP_E_PARAM_POINTER	0x12
passed as an argument			
API call with wrong PDU ID	Development	XCP_E_INVALID_PDUID	0x03

7.5.2 Runtime Errors

< There are no runtime errors.>

7.5.3 Transient Faults

< There are no transient faults.>

7.5.4 Production Errors

< There are no production errors.>

7.6 Error detection

For details refer to the chapter 7.3 "Error Detection" in SWS_BSWGeneral.

7.7 Error notification

For details refer to the chapter 7.4 "Error notification" in SWS_BSWGeneral.

7.8 Version checking

For details refer to the chapter 5.1.8 "Version Check" in SWS_BSWGeneral.

8 API specification

8.1 Imported types

In this chapter all types included from the following files are listed:

[SWS_Xcp_00801] [

Module	Imported Type
ComStack_Types	NetworkHandleType
	PduldType
	PduInfoType
Fr	Fr_ChannelType
Os	CounterType
	StatusType
	TickRefType
Std_Types	Std_ReturnType
	Std_VersionInfoType

] ()

8.2 Type definitions

8.2.1 Xcp_ConfigType

[SWS_Xcp_00845] [

Name:	Xcp_ConfigType		
Туре:	Structure		
	implementation specific The content of the initialization data structure is implementation specific		
Description:	This is the type of the data structure containing the initialization data for XCP.		

] ()

8.2.2 Xcp_Transmission Mode Type

[SWS_Xcp_00846] [

Name:	Xcp_TransmissionModeType		
Type:	Enumeration		
Range:	XCP_TX_OFF 0x00 Transmission Disabled		
	XCP_TX_ON 0x01 Transmission Enabled		
Description:	Handles the enabling and disabling of the transmission mode		

] ()

8.3 Function definitions

This is a list of functions provided for upper layer modules.

8.3.1 Xcp_Init

[SWS_Xcp_00803] [

<u> </u>	xop_oooo]			
Service name:	Xcp_Init	Xcp_Init		
Syntax:	<pre>void Xcp_Init(const Xcp_ConfigType* Xcp_ConfigPtr)</pre>			
Service ID[hex]:	0x00			
Sync/Async:	Synchronous			
Reentrancy:	Non Reentrant	Non Reentrant		
Parameters (in):	Xcp_ConfigPtr	Pointer to a selected configuration structure		
Parameters (inout):	None			
Parameters (out):	None			
Return value:	void			
Description:	This service initialize	s interfaces and variables of the AUTOSAR XCP layer.		

] (SRS_BSW_00405, SRS_BSW_00101, SRS_BSW_00358, SRS_BSW_00414, SRS_Xcp_29017)

[SWS_Xcp_00802] [The function Xcp_Init shall internally store the configuration address to enable subsequent API calls to access the configuration] ()

8.3.2 Xcp_GetVersionInfo

[SWS_Xcp_00807] [

Service name:	Xcp_GetVersionInfo		
Syntax:	<pre>void Xcp_GetVersionInfo(Std_VersionInfoType* versioninfo)</pre>		
Service ID[hex]:	0x01		
Sync/Async:	Synchronous		
Reentrancy:	Reentrant		
Parameters (in):	None		
Parameters (inout):	None		
Parameters (out):	versioninfo F	Pointer to where to store the version information of this module.	
Return value:	void		
Description:	Returns the version information of this module.		

J (SRS_BSW_00402, SRS_BSW_00407, SRS_BSW_00411, SRS_BSW_00374, SRS_BSW_00379, SRS_BSW_00003, SRS_BSW_00318)

[SWS_Xcp_00825] [

If development error detection for the Xcp module is enabled, then the function <code>Xcp_GetVersionInfo</code> shall check whether the parameter VersioninfoPtr is a NULL pointer (<code>NULL_PTR</code>). If VersioninfoPtr is a NULL pointer, then the function <code>Xcp_GetVersionInfo</code> shall raise the development error <code>XCP_E_PARAM_POINTER</code> and return.] ()

8.4 Call-back notifications

[SWS_Xcp_00836] [

This is a list of functions provided for other modules. The function prototypes of the callback functions shall be provided in the file Xcp_Cbk.h| ()

8.4.1 Xcp_<Lo>RxIndication

[SWS_Xcp_00813] [

[OVO_ACP_000	••11		
Service name:	Xcp_ <lo>RxIndication</lo>		
Syntax:	<pre>void Xcp_<lo>RxIndication(PduIdType RxPduId, const PduInfoType* PduInfoPtr)</lo></pre>		
Service ID[hex]:	0x42		
Sync/Async:	Synchronous		
Reentrancy:	Reentrant for different Pdulds. Non reentrant for the same Pduld.		
	RxPduld ID of the received PDU.		
Parameters (in):	PduInfoPtr Contains the length (SduLength) of the received PDU, a pointer to a buffer (SduDataPtr) containing the PDU, and the MetaData related to this PDU.		
Parameters (inout):	None		
Parameters (out):	None		
Return value:	None		
Description:	Indication of a received PDU from a lower layer communication interface module.		

] ()

The callback function <code>Xcp_<Lo>RxIndication</code> is called by the Bus Interfaces, Ethernet Socket Adaptor or CDD and is implemented by the Xcp module.

[SWS_Xcp_00847] [

The callback function <code>Xcp_<Lo>RxIndication</code> shall inform the DET, if development error detection is enabled (<code>xcp_dev_error_detect</code> is set to TRUE) and if function call has failed because of the following reasons:

- Xcp was not initialized (XCP E NOT INITIALIZED)
- PduInfoPtr equals NULL_PTR (XCP E PARAM POINTER)
- Invalid PDUID (XCP E INVALID PDUID) ()

The function <code>Xcp_<Lo>RxIndication</code> shall be called by the <code>Xcp module</code>'s environment in an interrupt context.

8.4.2 Xcp_<Lo>TxConfirmation

[SWS_Xcp_00814] [

Service name:	Xcp_ <lo>TxC</lo>	Xcp_ <lo>TxConfirmation</lo>		
Syntax:	_	<pre>void Xcp_<lo>TxConfirmation(PduIdType TxPduId,</lo></pre>		
	_	urnType result		
Service ID[hex]:	0x40			
Sync/Async:	Synchronous			
Reentrancy:	Reentrant for c	lifferent Pdulds. Non reentrant for the same Pduld.		
	TxPduld	ID of the PDU that has been transmitted.		
Parameters (in):		E_OK: The PDU was transmitted. E_NOT_OK: Transmission of the PDU failed.		
Parameters (inout):	None			
Parameters (out):	None			
Return value:	None			
Description:		r communication interface module confirms the transmission of a lure to transmit a PDU.		

I()

Note:

The callback function <code>Xcp_<Lo>TxConfirmation</code> is called by the Bus Interfaces, Ethernet Socket Adaptor or CDD and is implemented by the Xcp module.

[SWS_Xcp_00840] [

If development error detection for the XCP module is enabled: if the function $Xcp_{Lo}TxConfirmation$ is called before the XCP was initialized successfully, the function $Xcp_{Lo}TxConfirmation$ shall raise the development error XCP E NOT INITIALIZED and return.] ()

[SWS_Xcp_00841] [

Caveats of Xcp_<Lo>TxConfirmation:

- The call context is either on interrupt level (interrupt mode) or on task level
- The Xcp module is initialized correctly.

] ()

8.4.3 Xcp_<Lo>TriggerTransmit

[SWS_Xcp_00835] [

Service name:	Xcp_ <lo>TriggerTransmit</lo>		
Syntax:	<pre>Std_ReturnType Xcp_<lo>TriggerTransmit(PduIdType TxPduId, PduInfoType* PduInfoPtr)</lo></pre>		
Service ID[hex]:	0x41		
Sync/Async:	Synchronous		
Reentrancy:	Reentrant for different Pdulds. Non reentrant for the same Pduld.		
Parameters (in):	TxPduId ID of the SDU that is requested to be transmitted.		
Parameters (inout):	PduInfoPtr Contains a pointer to a buffer (SduDataPtr) to where the SDU data shall be copied, and the available buffer size in SduLengh. On return, the service will indicate the length of the copied SDU data in SduLength.		

Parameters (out):	None
Return value:	Std_ReturnType E_OK: SDU has been copied and SduLength indicates the number of copied bytes. E_NOT_OK: No SDU data has been copied. PduInfoPtr must not be used since it may contain a NULL pointer or point to invalid data.
·	Within this API, the upper layer module (called module) shall check whether the available data fits into the buffer size reported by PduInfoPtr->SduLength. If it fits, it shall copy its data into the buffer provided by PduInfoPtr->SduDataPtr and update the length of the actual copied data in PduInfoPtr->SduLength. If not, it returns E_NOT_OK without changing PduInfoPtr.

I()

Note:

The callback function Xcp_<Lo>TriggerTransmit is called by the Bus Interfaces, Ethernet Socket Adaptor or CDD and is implemented by the Xcp module.

[SWS_Xcp_00842] [

If development error detection for the XCP module is enabled: if the function Xcp_<Lo>TriggerTransmit is called before the XCP was initialized successfully, the function Xcp_<Lo>TriggerTransmit shall raise the development error XCP E NOT INITIALIZED and return E NOT OK.| ()

[SWS_Xcp_00843] [

Caveats of Xcp_<Lo>TriggerTransmit:

- The call context is either on interrupt level (interrupt mode) or on task level
- The Xcp module is initialized correctly.| ()

8.4.4 Xcp_SetTransmissionMode

[SWS_Xcp_00844] [

Service name:	Yon SetTran	Xcp_SetTransmissionMode		
Syntax:	void Xcp_	SetTransmissionMode(
	Netwo	rkHandleType Channel,		
	Xcp T	ransmissionModeType Mode		
)			
Service ID[hex]:	0x05			
Sync/Async:	Synchronous	3		
Reentrancy:	Non Reentra	Non Reentrant		
Parameters (in):	Channel	The Network channel for the used bus communication		
rarameters (m).	Mode	Enabled or disabled Transmission mode Parameters		
Parameters	None			
(inout):				
Parameters (out):	None			
Return value:	None			
Description:	This API is used to turn on and off of the TX capabilities of used communication bus channel in XCP module.			

| () |

[SWS_Xcp_00848] [

The XCP module shall provide this service only if $XCP_SUPPRESS_TX_SUPPORT$ (see ECUC XCP 00169) equals TRUE.] ()

[SWS_Xcp_00849][

If <code>Xcp_SetTransmissionMode(Channel, Mode)</code> is called and parameter <code>Mode equals XCP_TX_OFF</code>, all <code>TxPDUs</code> which are assigned to <code>Channel shall not be transmitted.</code> ()

Note: It could be derived from <Bus>If configuration and the global PDU parameter, to which specific communication channel the PDU is assigned to.

[SWS_Xcp_00850] [

If Xcp_SetTransmissionMode(Channel, Mode) is called and parameter Mode
equals XCP_TX_ON, all TxPDUs which are assigned to Channel shall be able to be
transmitted. | ()

8.5 Scheduled functions

The functions are called directly by Basic Software Scheduler. The following functions shall have no return value and no parameter. All functions shall be non reentrant.

8.5.1 Xcp_MainFunction

[SWS Xcp 00823] [

Xcp_MainFunction	
void Xcp MainFunction(
void	
)	
0x04	
Scheduled function of the XCP module	

(SRS BSW 00424, SRS BSW 00433, SRS BSW 00373)

[SWS_Xcp_00824] [

The XCP Main Function shall be called cyclically. ()

8.6 Expected Interfaces

In this chapter, all interfaces required from other modules are listed.

8.6.1 Mandatory Interfaces

[SWS_Xcp_91001] [

API function	Description	
1 ()		

8.6.2 Optional Interfaces

[SWS_Xcp_00832] [

API function	Description
CanIf_Transmit	Requests transmission of a PDU.
Det_ReportError	Service to report development errors.
Frlf_DisableLPdu	Wraps the FlexRay Driver Function Fr_DisableLPdu. It disables the hardware resource of an LPdu for transmission/reception.
FrIf_ReconfigLPdu	Calls the FlexRay Driver's API Fr_ReconfigLPdu. The enum value "FR_CHANNEL_AB" shall not be used.
Frlf_Transmit	Requests transmission of a PDU.
GetCounterValue	This service reads the current count value of a counter (returning either the hardware timer ticks if counter is driven by hardware or the software ticks when user drives counter).
GetElapsedValue	This service gets the number of ticks between the current tick value and a previously read tick value.
SoAd_IfTransmit	Requests transmission of a PDU.

] ()

8.6.3 Configurable interfaces

In this chapter, all interfaces are listed where the target function could be configured. The target function is usually a call-back function. The names of these kind of interfaces is not fixed because they are configurable.

The XCP module offers configurable interfaces to be used by Complex Driver(s).

10 Configuration specification

In general, this chapter defines configuration parameters and their clustering into containers. In order to support the specification Chapter 10.1 describes fundamentals. It also specifies a template (table) you shall use for the parameter specification. We intend to leave Chapter 10.1 in the specification to guarantee comprehension.

Chapter 10.2 specifies the structure (containers) and the parameters of the module XCP.

Chapter 10.3 specifies published information of the module XCP.

10.1 How to read this chapter

For details refer to the chapter 10.1 "Introduction to configuration specification" in SWS BSWGeneral.

10.2 Containers and configuration parameters

The following chapters summarize all configuration parameters. The detailed meanings of the parameters describe Chapters 7 and Chapter 8.

[SWS Xcp 00102] [

The listed configuration items can be derived from a network description database, which is based on the EcuConfigurationTemplate. The configuration tool shall extract all information to configure the XCP.| (SRS_BSW_00159)

[SWS_XCP_00103] [

The configuration tool must check the consistency of the configuration at configuration time. (SRS BSW 00167)

[SWS Xcp 00104] [

Configuration rules and constraints for plausibility checks shall be performed during configuration time, wherever possible.] (SRS_BSW_00167)

[SWS_Xcp_00105] [

These dependencies between FlexRay Interface and FlexRay Driver configuration must be provided at configuration time by the configuration tools. J (SRS BSW 00167)

10.2.1 Xcp

SWS Item	ECUC_Xcp_00182:
Module Name	Хср
Module Description	Configuration of the XCP module
Post-Build Variant Support	true
Supported Config Variants	VARIANT-POST-BUILD, VARIANT-PRE-COMPILE

Included Containers						
Container Name	Multiplicity	Scope / Dependency				
XcpConfig		This container contains the configuration parameters and sub containers of the AUTOSAR Xcp module.				
XcpGeneral		This container contains the general configuration parameters of the XCP.
