Disclaimer

This specification and the material contained in it, as released by AUTOSAR, is for the purpose of information only. AUTOSAR and the companies that have contributed to it shall not be liable for any use of the specification.

The material contained in this specification is protected by copyright and other types of Intellectual Property Rights. The commercial exploitation of the material contained in this specification requires a license to such Intellectual Property Rights.

This specification may be utilized or reproduced without any modification, in any form or by any means, for informational purposes only. For any other purpose, no part of the specification may be utilized or reproduced, in any form or by any means, without permission in writing from the publisher.

The AUTOSAR specifications have been developed for automotive applications only. They have neither been developed, nor tested for non-automotive applications.

The word AUTOSAR and the AUTOSAR logo are registered trademarks.

Advice for users

AUTOSAR specifications may contain exemplary items (exemplary reference models, "use cases", and/or references to exemplary technical solutions, devices, processes or software).

Any such exemplary items are contained in the specifications for illustration purposes only, and they themselves are not part of the AUTOSAR Standard. Neither their presence in such specifications, nor any later documentation of AUTOSAR conformance of products actually implementing such exemplary items, imply that intellectual property rights covering such exemplary items are licensed under the same rules as applicable to the AUTOSAR Standard.

1 Introduction and Functional Overview

This specification specifies the functionality, API and the configuration of the AUTOSAR Basic Software module "FlexRay Interface".

In the AUTOSAR Layered Software Architecture Layered Software Architecture, the FlexRay Interface belongs to the *ECU Abstraction Layer*, or more precisely, to the *Communication Hardware Abstraction*. This indicates the main task of the FlexRay Interface:

Provide to upper layers an abstract interface to the FlexRay Communication System. At least as far as data transmission (i.e. data sending and reception) is concerned, this interface shall be uniform for all bus systems in Autosar (FlexRay, CAN, LIN). Thus, the upper layer (Communication Services like PDU Router, Transport Protocol, and Network Management and others) may access all underlying bus systems for data transmission in a uniform manner. The configuration of the FlexRay Interface however is bus-specific, since it takes into account the specific features of the communication system.

The FlexRay Interface does not directly access the FlexRay hardware (FlexRay Communication Controller and FlexRay Transceiver), but by means of one or more hardware-specific Driver modules.

In order to access the FlexRay Communication Controller(s), the FlexRay Interface uses one or multiple FlexRay Driver modules, which abstract the specific features and interfaces (CHI) of the respective FlexRay Communication Controller(s).

Likewise, in order to access the FlexRay Transceiver(s), the FlexRay Interface shall use one or multiple FlexRay Transceiver Driver module(s), which abstract the specific features and interfaces of the respective FlexRay Transceiver(s)

Therefore, the FlexRay Interface executable code (however, not the configuration used during runtime) shall be completely independent of the FlexRay Communication Controller(s) and the FlexRay Transceiver(s).

Note: The FlexRay Interface is specified in a way that allows for object code delivery of the code module, following the "one-fits-all" principle, i.e. the entire configuration of the FlexRay Interface can be carried out without modifying any source code. Thus, the configuration of the FlexRay Interface can be carried out largely without detailed knowledge of the underlying hardware.

The FlexRay Interface provides to upper layer AUTOSAR <u>BSW</u> modules the following groups of functions:

- initialization
- data transmission (sending and reception)
- start/halt/abort communication
- FlexRay specific functions (e.g. send wake-up pattern)
- set operation mode
- get status information
- various timer functions

2 Information about this Document

2.1 General Hints

In general, the FlexRay Interface has no knowledge of the origin of a PDU passed to it in an API service call.

Therefore, throughout this document, the term "PDU" is being used for PDUs originating from or sent to:

- AUTOSAR Com (I-PDU) via the PDU-Router, or
- AUTOSAR FlexRay TP (N-PDU), or
- AUTOSAR FlexRay NM
- AUTOSAR XCP

In addition to the above-mentioned AUTOSAR BSW modules, the Frlf shall, with the functionality described within the specification in hand, also support other non-AUTOSAR upper layer software modules (Complex Drivers), provided that these modules interact with the Frlf in the same manner as the upper layer AUTOSAR BSW modules.

Throughout this document, several scenarios for changing configuration data are mentioned. They are being used as follows:

- "pre compile time" = carried out *before* compiling the code of the FlexRay Interface, since the code generation depends on this setting.
- "at system configuration time" = static configuration parameters stored in the FlexRay Interface; may be defined *after* compilation of the code of the FlexRay Interface ("link time" or "post build time"), but have to be defined *before* the first execution of the FlexRay Interface code.
- "during runtime" = dynamically switching (in <u>POC</u>:normal active state of the FlexRay <u>CC</u>, if supported) between different configuration parameter sets stored in the static configuration of the FlexRay Interface, or the FlexRay Driver, respectively.

Everything not explicitly mentioned in this document, should be considered as implementation-specific.

2.2 Acronyms and Abbreviations

The following acronyms and abbreviations are used throughout this document:

Acronym:	Description:	
BSW	(AUTOSAR) Basic Software	
CAS	Collision Avoidance Symbol	
CC	(FlexRay) Communication Controller	
CDD	Complex Driver	
CHI	Controller Host Interface of a FlexRay CC	
COM	Communication (AUTOSAR BSW module)	
ComM	Communication Manager (AUTOSAR BSW module)	
DEM	Diagnostic Event Manager (AUTOSAR BSW module)	
DET	Default Error Tracer (AUTOSAR BSW module)	
Frlf	FlexRay Interface (AUTOSAR BSW module)	
FrNm	FlexRay Network Management (AUTOSAR BSW module)	
FrTp	FlexRay Transport Layer (AUTOSAR BSW module)	
ISR	Interrupt Service Routine	
MCG	Module Configuration Generator	
PduR	PDU Router (AUTOSAR BSW module)	
POC	Protocol Operation Control	
WUDOP	Wake-Up During Operation	
WUP	Wake-Up Pattern	
WUS	Wake-Up Symbol	
System Designer The person responsible for the configuration of all system		
	parameters that do not influence the executable code itself (i.e.	
	the sequence of instructions executed during runtime), but the	
	data used to configure which operations this executable code	
	performs on which data and at which points in time.	

Abbreviation:	Description:
i.e.	[lat.] id est = [eng.] that is
e.g.	[lat.] exempli gratia = [eng.] for example
	not applicable

3.3 Related specification

AUTOSAR provides a General Specification on Basic Software modules [16] (SWS BSW General), which is also valid for FlexRay Interface.

Thus, the specification SWS BSW General shall be considered as additional and required specification for FlexRay Interface.

4 Constraints and Assumptions

4.1 Limitations

The FlexRay <u>BSW</u> modules are only able to handle a single thread of execution per Cluster. The execution for a particular Cluster must not be pre-empted by itself for the same Cluster. The same applies to the execution of the FlexRay Job List Execution Function.

It is not possible to transmit signals, PDUs, and/or L-SDUs, which exceed the available buffer size of the used FlexRay CC during normal operation. Longer signals, PDUs, and/or L-SDUs have to be transmitted using the FlexRay Transport Protocol.

Note: The FlexRay Interface does not make any PDU payload-dependent routing decisions.

Note: In order for the AUTOSAR FlexRay <u>BSW</u> (<u>Frlf</u> and FlexRay Driver) modules to be able to control a FlexRay <u>CC</u>, this <u>CC</u> must allow for configuring its transmit/receive buffers to support the Cycle Counter Filter Criterion / (Support of Slot/Cycle Muliplexing)

For 2.1 FlexRay Hardware, the following Cycle Counter Filtering is possible

Cycle Number = (B + n * 2R)mod64

with **exactly one tuple** of values for **B** and **2R**, where:

- Base Cycle **B** ∈ [0 ... 63]
- Cycle Repetition **2R** ; R ∈ [0 ... 6]
- Variable **n** = 0 ... 63
- B < 2R

For 3.0 FlexRay Hardware, the Cycle Counter Filtering shall be possible as described in [19]

4.2 Applicability to Car Domains

The FlexRay BSW Stack can be used wherever high data rates and fault tolerant communication (in conjunction with AUTOSAR <u>COM</u>) are required. Of course, it can also be used for less-demanding use cases, i.e. for low data rates or non-fault-tolerant communication. Furthermore, it enables the synchronized operation of several ECUs within a car.

5 Dependencies to Other Modules

5.1 AUTOSAR Operating System

[SWS_FrIf_05099] [There is one dedicated FlexRay Job List Execution Function for each FlexRay Cluster.] ()

[SWS_FrIf_05100] [The FlexRay Interface module shall execute the Flexray Job List Execution Function. | ()

Note: It is up to the implementer whether the FlexRay Job List Execution Functions run in a task context or in an ISR.

5.2 All Upper Layer AUTOSAR BSW Modules

[SWS_FrIf_05050] [The calling of the FlexRay Job List Execution Function by the FlexRay Interface module synchronously to the FlexRay Global Time shall ensure that both the indication (to an upper layer <u>BSW</u> module) of received data and the request (to an upper layer <u>BSW</u> module) for data to be sent occur synchronously to the FlexRay Global Time. | (SRS Fr 05000)

[SWS_FrIf_05148] [The FlexRay Interface module shall ensure data consistency in its buffers. | ()

Rationale for <u>SWS_Frlf_05148</u>: If the respective upper layer <u>BSW</u> module does not operate synchronously to the FlexRay Global Time, these occurrences are asynchronous to the code execution of this <u>BSW</u> module.

5.3 AUTOSAR PDU-Router

The <u>Frlf</u> module declares and calls some callback functions of the PDU-Router in order to confirm transmission and notify reception of PDUs.

5.4 AUTOSAR FlexRay Network Management

The <u>Frlf</u> module declares and calls some callback functions of the FlexRay Network Management in order to confirm transmission and notify reception of PDUs.

5.5 AUTOSAR FlexRay Transport Protocol

The <u>Frlf</u> module declares and calls some callback functions of the FlexRay Transport Protocol in order to confirm transmission and notify reception of PDUs.

5.6 AUTOSAR FlexRay Driver

The <u>Frlf</u> module has a tight relation to the FlexRay Driver since many of the FlexRay-related services offered by the <u>Frlf</u> module to upper layer <u>BSW</u> modules are actually carried out by the FlexRay Driver <u>BSW</u> module. For those services, the <u>Frlf</u> module mainly performs only an abstraction of the communication hardware specific information (e.g. the topology of the FlexRay Communication System) and then calls the respective FlexRay Driver with the appropriate parameters.

The FlexRay Driver module has to be the only BSW module which has to run necessarily synchronous to the FlexRay Interface.

5.7 AUTOSAR FlexRay Transceiver Driver

The <u>Frlf</u> module has a tight relation to the FlexRay Transceiver Driver since calls of API services of the FlexRay Transceiver Driver are also routed through the <u>Frlf</u> module in order to abstract the communication hardware specific information (e.g. the topology of the FlexRay Communication System).

5.8 File Structure

5.8.1 Header File Structure

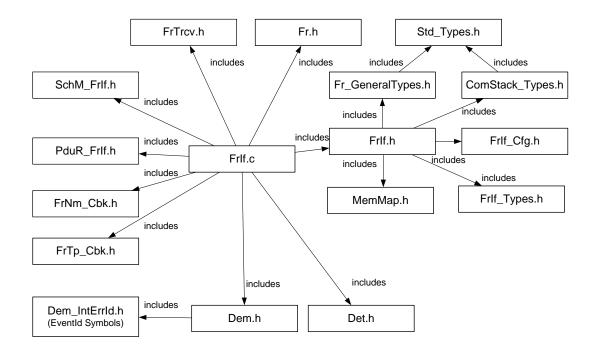

Figure 5-1: FlexRay Interface Header File Structure

The header file structure shall contain the following header files:

[SWS_FrIf_05744] [Fr.h contains the declarations of the API services of the FlexRay Driver used by the FlexRay Interface] ()

[SWS_FrIf_05745] [FrTrcv.h contains the declarations of the API services of the FlexRay Transceiver Driver used by the FlexRay Interface. | ()

[SWS_FrIf_05746] [Fr_GeneralTypes.h contains declarations shared by all AUTOSAR FlexRay BSW modules] ()

[SWS_FrIf_05747] [ComStack_Types.h contains the communication module abstracted datatypes shared by AUTOSAR communication BSW. | ()

[SWS_FrIf_05748] [PduR_FrIf.h contains the declarations of API services the PDU router offers to the FlexRay Interface] ()

[SWS_FrIf_05749] [FrNm_Cbk.h contains the declarations of API services the FrNm offers to the FlexRay Interface] ()

[SWS_FrIf_05750] [FrTp_Cbk.h contains the declarations of API services the FrTp offers to the FlexRay Interface| ()

[SWS_FrIf_05751] [Det.h contains the declarations of the API services of the Det optionally used by the FlexRay Interface] ()

[SWS_FrIf_05752] [SchM_FrIf.h contains the declaration of the API services the SchM offers to the FlexRay Interface] ()

[SWS Frif 05753] [Frif Types.h contains the declaration of Frif specific types. | ()

Note:

By this inclusion the APIs to report errors as well as the required Event Id symbols are included.

Note:

This specification defines the name of the Event Id symbols, which are provided by XML to the DEM configuration tool.

[SWS_FrIf_15140] [The implementation of the FrIf module shall provide the header file *FrIf.h*, which is the main module interface file. | ()

[SWS_FrIf_25140] [It shall contain all types and function prototypes required by the FrIf module's environment.] ()

[SWS_FrIf_05087] [The FrIf module source code file(s) shall include *SchM_FrIf.h* if data consistency mechanisms of the BSW scheduler are required as described in [13].] ()

[SWS_FrIf_05090] [The header file *FrIf.h* shall contain a software and specification version number.] (SRS_BSW_00004)

[SWS_FrIf_05091] [*FrIf.h* shall include Fr_GeneralTypes.h for the include of general FlexRay type declaration] (SRS_BSW_00456)

[SWS_FrIf_05097] [The types specified in SWS_FrIf_05091 shall be declared in Fr_GeneralTypes.h] (SRS_BSW_00456)

[SWS_FrIf_05098] [The header file FrTSyn_Cbk.h shall contain the declarations of API services the FrTSyn offers to the FlexRay Interface] (SRS_BSW_00456)

6 Requirements Traceability

Requirement	Description	Satisfied by
SRS_BSW_00004	All Basic SW Modules shall perform a pre-processor check of the versions of all imported include files	SWS_Frlf_05090
SRS_BSW_00101	The Basic Software Module shall be able to initialize variables and hardware in a separate initialization function	SWS_Frlf_05003
SRS_BSW_00170	The AUTOSAR SW Components shall provide information about their dependency from faults, signal qualities, driver demands	SWS_Frlf_05089
SRS_BSW_00171	Optional functionality of a Basic-SW component that is not required in the ECU shall be configurable at pre-compile-time	SWS_Frlf_05089
SRS_BSW_00304	All AUTOSAR Basic Software Modules shall use the following data types instead of native C data types	SWS_Frlf_05001
SRS_BSW_00334	All Basic Software Modules shall provide an XML file that contains the meta data	SWS_Frlf_05089
SRS_BSW_00336	Basic SW module shall be able to shutdown	SWS_Frlf_05006
SRS_BSW_00342	It shall be possible to create an AUTOSAR ECU out of modules provided as source code and modules provided as object code, even mixed	SWS_Frlf_05078
SRS_BSW_00345	BSW Modules shall support pre-compile configuration	SWS_Frlf_05069
SRS_BSW_00348	All AUTOSAR standard types and constants shall be placed and organized in a standard type header file	SWS_Frlf_05001
SRS_BSW_00353	All integer type definitions of target and compiler specific scope shall be placed and organized in a single type header	SWS_Frlf_05001
SRS_BSW_00358	The return type of init() functions implemented by AUTOSAR Basic Software Modules shall be void	SWS_Frlf_05003
SRS_BSW_00361	All mappings of not standardized keywords of compiler specific scope shall be placed and organized in a compiler specific type and keyword header	SWS_Frlf_05001
SRS_BSW_00375	Basic Software Modules shall report wake-up reasons	SWS_Frlf_05036
SRS_BSW_00378	AUTOSAR shall provide a boolean type	SWS_Frlf_05001
SRS_BSW_00404	BSW Modules shall support post-build configuration	SWS_Frlf_05069
SRS_BSW_00405	BSW Modules shall support multiple configuration sets	SWS_Frlf_05003
SRS_BSW_00406	A static status variable denoting if a BSW module is initialized shall be initialized with value 0 before any APIs of the BSW module is called	SWS_Frlf_05298
SRS_BSW_00407	Each BSW module shall provide a function to read out the version information of a dedicated module implementation	SWS_Frlf_05002
SRS_BSW_00411	All AUTOSAR Basic Software Modules shall apply a naming rule for enabling/disabling the existence of	SWS_Frlf_05002

	the API	
SRS_BSW_00414	Init functions shall have a pointer to a configuration structure as single parameter	SWS_Frlf_05003
SRS_BSW_00456	- A Header file shall be defined in order to harmonize BSW Modules	SWS_Frlf_05091, SWS_Frlf_05097, SWS_Frlf_05098
SRS_Fr_05000	Synchronous SW Modules shall be supported	SWS_Frlf_05050
SRS_Fr_05007	The FlexRay Interface shall be able to communicate with at least four FlexRay CCs via the appropriate FlexRay Driver(s)	SWS_Frlf_05053
SRS_Fr_05010	Each PDU shall have one PDU-ID	SWS_Frlf_05052
SRS_Fr_05013	The local Memory Space shall be initialized	SWS_Frlf_05003
SRS_Fr_05015	The FlexRay Interface shall provide a software interface to start-up a specific FlexRay CC	SWS_Frlf_05005
SRS_Fr_05016	A FlexRay CC Communication shall be aborted when wanted	SWS_Frlf_05007
SRS_Fr_05018	The FlexRay Interface shall provide a software interface to send a wake-up pattern on a channel or CC	SWS_Frlf_05011
SRS_Fr_05022	FlexRay CC POC Status shall be available	SWS_Frlf_05014
SRS_Fr_05027	A PDU shall be transmitted via the FlexRay communication system	SWS_Frlf_05063
SRS_Fr_05031	A FlexRay CC shall be initialized and configured	SWS_Frlf_05004
SRS_Fr_05039	The Operation Mode of a FlexRay Transceiver shall be set	SWS_Frlf_05034
SRS_Fr_05042	The FlexRay Interface shall allow switching from one configuration to another one in Normal Active Mode	SWS_Frlf_05061
SRS_Fr_05056	Configuration of the FlexRay Interface shall be done at System Configuration Time	SWS_Frlf_05054
SRS_Fr_05063	A FlexRay CC Communication shall be halted when wanted	SWS_Frlf_05006

SRS_Fr_05126	PDU Update/Valid Information shall be handled	SWS_Frlf_05056
SRS_Fr_05130	The FlexRay Interface shall support PDU transmission buffer queues	SWS_Frlf_05058
SRS_Fr_05157	The Operation Mode of a FlexRay Transceiver shall be available	SWS_Frlf_05035
SRS_Fr_05158	The wake-up reason of a specific FlexRay Transceiver device shall be available	SWS_Frlf_05036
SRS_Fr_05161	Pending Wake-up Events of a Transceiver shall be cleared if necessary	SWS_Frlf_05039
SRS_Fr_05170	PDUs received via the FlexRay communication system shall be retrieved	SWS_Frlf_05062

6.1 Specification Items

The following Items shall be seen as implementation hints only!

Functional Specification

Abstraction of FlexRay Transceivers	Frlf05105,
	Frlf05106
Usage of Controller and Channel Index	Frlf05106
Usage of zero-based index	SWS_Frlf_05107
Usage of FR Cluster Index	Frlf05108
Configuration Data	Frlf05109
Usage of PDU index	SWS_Frlf_05110
Support one of both or both FlexRay Channels	SWS_Frlf_05111
Support of at least four FlexRay Clusters	SWS_Frlf_05112
Support of at least one absolute timer per FlexRay CCs	SWS_Frlf_05113

FlexRay Interface State Machine

One State Machine per Cluster	SWS_Frlf_05115
FrIf_State offline during initialization	SWS_Frlf_05117

FlexRay Interface Main Function

One Main Function for each FlexRay Cluster	SWS_Frlf_05119
Main Function tasks	Frlf05120

Data Communication via FlexRay

Packaging of multible PDUs in one FR Frame	SWS_Frlf_05121
Frame construction plan (layout)	SWS_Frlf_05122
Frame construction plan (config)	SWS_Frlf_05123
Transmission rule	SWS_Frlf_05124
Update Information per PDU	SWS_Frlf_05125
Location of Update Information	SWS_Frlf_05126
Configuration of Update Information	SWS_Frlf_05127
Indication in case of no update information	SWS_Frlf_05128
Transmission with Immediate Buffer Access	SWS_Frlf_05129
Ensure synchronous buffer access	SWS_Frlf_05130
Sortation of Communication Job	SWS_Frlf_05131
Communication Job properties	<u>Frlf05368</u>
Communication Job execution start time	SWS_Frlf_05133
Actions specified by Communication Operation	SWS_Frlf_05134
Communication Operation properties	<u>Frlf05369</u>
Job List Execution Function nameing	SWS_Frlf_05136
Job List synchronously to global time	SWS_Frlf_05137
Job List Execution Function actions	SWS_Frlf_05138

7 Functional Specification

7.1 FlexRay BSW Stack

As part of the AUTOSAR Layered Software Architecture according to [2], the FlexRay BSW modules also form a layered software stack.

Figure 7-1 depicts the basic structure of this FlexRay BSW stack. The Frlf module accesses several CCs using the FlexRay Driver layer, which can be made up of several FlexRay Drivers modules. The FlexRay Transceivers are not shown in this figure; however, the structure that applies to the FlexRay Drivers and the FlexRay CCs analogously applies to the FlexRay Transceiver Drivers and the FlexRay Transceivers.

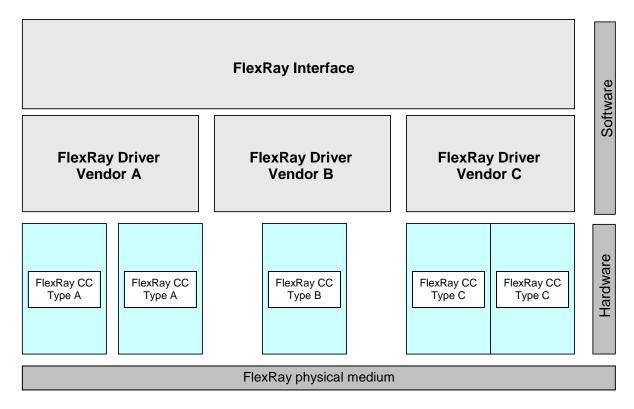

Figure 7-1: Basic Structure of the FlexRay BSW Stack

7.2 Indexing Scheme

7.2.1 Principle

Most of the Frlf module's API services used for accessing the numerous (hardware and software) resources1 map to corresponding API services of the underlying FlexRay Driver(s), or FlexRay Transceiver Driver(s), respectively.

In order to select those resources spread over the various entities2 accessed via the Frif module, the FlexRay-related AUTOSAR BSW modules use an indexing scheme that is exemplarily described in Figure 7-2 and Figure 7-3.

Definition ControllerIndex: The ConctrollerIndex is an abstract, unique, zero-based consecutive index to achieve the abstraction of the FlexRay Communication Controllers, independent of their type, location, and access method.

Definition ClusterIndex: The ClusterIndex is an abstract, unique, zero-based consecutive index to achieve the abstraction of the FlexRay Clusters, independent of their type, location, and access method.

Definition ChannelIndex: The ChannelIndex has either the value FR CHANNEL A or FR CHANNEL B. In combination with the ControlerIndex, the corresponding FlexRay Transceiver is identified.

[SWS Frif 05052] [The Frif module shall achieve the abstraction (of the CCs and Drivers) by providing to the upper layer BSW modules an abstract, unique, zerobased consecutive index for each sort of resource, independent of their type, location, and access method. | (SRS Fr 05010)

Rationale: The Frlf module achieves the abstraction (of the CCs and Drivers) by providing these abstract indices to the upper layer BSW modules.

The Frlf module API service uses the abstract index passed to it by the upper layer **BSW** module to retrieve:

- 1. the function pointer to a corresponding lower layer BSW module's API **service** from a static configuration data table containing function pointers to all API services of all lower layer BSW modules called by the Frlf module, and
- 2. the translated index used in the call to the lower layer BSW module's API **service** from a static configuration data table.

Since this static configuration data table contains function pointers to the lower layer BSW module's API services, it obviously has to be linked against the linked and located code of the lower layer BSW modules.

The Frlf module then calls the corresponding lower layer BSW module's API service via the function pointer and passes the translated index in the API call.

The function descriptions in chapter 8 specify the required calls of corresponding lower layer BSW module's API services in detail.

¹ E.g. timers, configuration data sets, etc.

² FlexRay Drivers, FlexRay Communication Controllers, FlexRay Transceiver Drivers, and FlexRay Transceivers

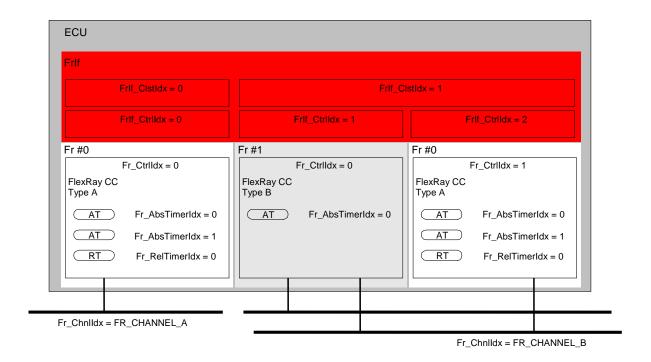

Figure 7-2: CC Indexing Scheme of the FlexRay Interface

[SWS_FrIf_05060] [In order to abstract for upper layer <u>BSW</u> modules the various CCs, which the <u>FrIf</u> module controls via the FlexRay Driver modules, the <u>FrIf</u> module offers an abstract, unique, zero-based consecutive index FrIfCtrIldx as configuration parameter, which maps to a tuple of FlexRay Driver API Service function pointer and CC index Fr_CtrIldx.] (SRS_Fr_05096)

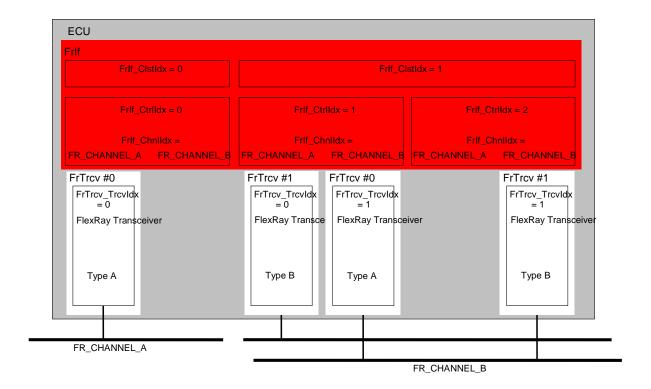

Figure 7-3: Flexray Transceiver Indexing Scheme of the FlexRay Interface

In order to abstract for upper layer <u>BSW</u> modules the various FlexRay Transceiver modules, which the <u>Frlf</u> module accesses via the FlexRay Transceiver Driver modules, the <u>Frlf</u> module takes advantage of the fact that each FlexRay Transceiver module is unambiguously assigned to a specific Channel on a specific FlexRay <u>CC</u>.

Therefore, the Frlf module abstracts the various FlexRay Transceivers by **a combination** of the two indices Frlf_Ctrlldx (Controller Index) and Frlf_Chnlldx (Channel Index) and maps this to a tuple of FlexRay Transceiver Driver API Service function pointer and FlexRay Transceiver index FrTrcv Trcvldx. (Transceiver Index)

The function descriptions in chapter 8 specify the required mapping of upper layer BSW module's parameters to corresponding lower layer <u>BSW</u> module's API services in detail."

[SWS_Frlf_05107] [Besides hardware and software resources, the <u>Frlf</u> module also numbers the logical structure elements presented by FlexRay with an abstract, unique, zero-based consecutive index.

The static configuration data of the Frlf module contains a data structure that specifies which FlexRay CC modules and which FlexRay Transceiver modules are connected to which Clusters, or in other words, that maps each value of Frlf_Clstldx to (one, or in general) a set of values for Frlf_Ctrlldx and tuples of (FrlfCtrllldx, Frlf_Chnlldx).] ()

[SWS_Frlf_05110] [The Frlf module shall number all PDUs to be transmitted with an abstract, unique, zero-based consecutive index TxPduld.] ()

Note:This index is used in the <u>Frlf</u> API service Frlf_Transmit() and allows the <u>Frlf</u> module to quickly identify (e.g. by a table look-up) the PDU that is passed to it by an upper layer <u>BSW</u> module, and to process it accordingly.

7.2.2 Supported Indexed Resources

[SWS_FrIf_05057] [It shall be possible that the <u>FrIf</u> module can be configured to support at least four (possibly different) **FlexRay Drivers** to access the FlexRay Communication Controllers.] (SRS_Fr_05097)

[SWS_FrIf_05053] [It shall be possible that the <u>FrIf</u> module can be configured using the parameter FRIF_CTRL_IDX to support at least four (possibly different) **FlexRay CCs**. | (SRS Fr 05007)

[SWS_FrIf_05111] [It shall be possible that the FrIf module can be configured to support one of both or both FlexRay Channels as specified in [17].] ()

[SWS_FrIf_05112] [It shall be possible that the FrIf module can be configured using the parameter FRIF_CLST_IDX to support at least four FlexRay Clusters.] ()

[SWS_FrIf_05113] [It shall be possible that the <u>FrIf</u> module can be configured using the parameter FRIF_ABS_TIMER_IDX to support at least one **absolute timer** per FlexRay <u>CCs</u>.] ()

7.3 FlexRay Interface State Machine

[SWS Frlf 05115] [

In order to allow to control the communication operations of the FlexRay system, the Frlf module shall implement a behavior, which is defined using a simple state machine (one per FlexRay cluster), called FlexRay Interface State Machine

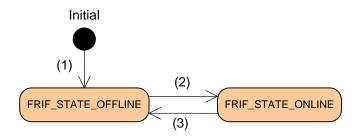

Figure 7-4: FlexRay Interface State Machine

Figure 7-4 shows the states and transistions that are visible to the user of a <u>Frlf</u> module. The two different states, which are defined as Frlf type Frlf_StateType (see 8.2.2), represent the communication capabilities of a Frlf module.

State	Description
FRIF_STATE_OFFLINE	No communication services are executed (see chapter 7.6 for details)
FRIF_STATE_ONLINE	All communication services (reception, transmission, transmission confirmation) are executed (see chapter 7.6 for details).

1 ()

[SWS_FrIf_05117] [During initialization of the FrIf by executing FrIf_Init() the FrIf_State for each cluster shall be initialized with state 'FRIF_STATE_OFFLINE'.

The transitions are requested by an API service Frlf_SetState() which takes the Cluster to process on and the Transistion name to invoke.] ()

[SWS_FrIf_05118] [If the FrIf module's environment calls the function FrIf_SetState with parameter FrIf_StateTransition = FRIF_GOTO_ONLINE and if the current state for the requested cluster is FRIF_STATE_OFFLINE, the FrIf module shall take the current state of the requested cluster to FRIF_STATE_ONLINE." (refer to figure 7-4 transsition (2)).

If the Frlf module's environment calls the function Frlf_SetState with parameter Frlf_StateTransition = FRIF_GOTO_ OFFLINE and if the current state for the requested cluster is FRIF_STATE_ONLINE, the Frlf module shall take the current state of the requested cluster to FRIF_STATE_OFFLINE." (refer to figure 7-4 transition (3)).

Otherwise, do not perform a state transition.

Transition Name	Transitions (see Figure 7-4)	Description
FRIF_GOTO_ONLINE	(2)	Transition resulting in FrIf_State FRIF_STATE_ONLINE
FRIF_GOTO_OFFLINE	(3)	Transition resulting in FrIf_State FRIF_STATE_OFFLINE

[SWS_FrIf_05501] [If the API FrIf_SetState with parameter FRIF_STATE_OFFLINE is called, the FlexRay Interface module shall check the parameter "TxConfCounter" for every PDU. If the value for the corresponding PDU is greater than 0, the FlexRay Interface shall call the upper layer using the API _TxConfirmation(id, E_NOT_OK).] ()

Note: It has to be ensured that the FlexRay Interface does not lose the TxConfCounter values at the point in time the API Frlf_SetState with parameter FRIF_STATE_OFFLINE is called.

7.3.1 FlexRay Interface Main Function

The FlexRay Interface Main Function needs to be called cyclically from a task body provided by the <u>BSW</u> Scheduler with a calling period (FRIF_MAINFUNCTION_PERIOD) depending on the FlexRay Cycle length and configurable at system configuration time.

Since the Cycle length of each Cluster is independent, the desired calling period of the FlexRay Interface Main Function might differ from Cluster to Cluster, except for "Transmission with Immediate Buffer Access".

[SWS_FrIf_05119] [The FrIf module shall provide one dedicated FlexRay Interface Main Function for each FlexRay Cluster that is controlled by that FrIf module.] ()

[SWS_FrIf_05283] [The API names of the FlexRay Interface Main Functions shall obey the following pattern:

- Frlf_MainFunction_0() for Cluster # 0 (Frlf_Clstldx = 0)
- Frlf MainFunction 1() for Cluster # 1 (Frlf Clstldx = 1)
- Frlf_MainFunction_2() for Cluster # 2 (Frlf_Clstldx = 2)
- Frlf MainFunction 3() for Cluster # 3 (Frlf Clstldx = 3)
- ... and so on, if more than 4 FlexRay Clusters are supported.

] ()

[SWS_FrIf_15120] [The Main Function monitors and controls the continuous execution of the FlexRay Job List Execution Function including the (re)synchronization if the current FlexRay Interface State Machine is FRIF STATE ONLINE. | ()

[SWS_FrIf_25120] [If one of the optional cluster-specific configuration parameters FRIF_E_NIT_CH_A, FRIF_E_NIT_CH_B, FRIF_E_SW_CH_A, FRIF_E_SW_CH_B or FRIF_E_ACS_CH_A, FRIF_E_ACS_CH_B exists, then call FrIf_GetChannelStatus for each FlexRay controller of the cluster and report the status to DEM as described below.] ()

[SWS_FrIf_35120] [If the optional configuration parameter FRIF_E_NIT_CH_A exists, then the channel status information shall be reported to DEM as Dem_SetEventStatus (FRIF_E_NIT_CH_A, DEM_EVENT_STATUS_PREFAILED) when any of the error bits of a single controller (Channel A NIT status data vSS!SyntaxError, vSS!Bviolation) is set or as Dem_SetEventStatus (FRIF_E_NIT_CH_A, DEM_EVENT_STATUS_PREPASSED) when none of these error bits is set.] ()

[SWS_FrIf_45120] [If the optional configuration parameter FRIF_E_NIT_CH_B exists, then the channel status information shall be reported to DEM as Dem_SetEventStatus (FRIF_E_NIT_CH_B, DEM_EVENT_STATUS_PREFAILED) when any of the error bits of a single controller (Channel B NIT status data vSS!SyntaxError, vSS!Bviolation) is set or as Dem_SetEventStatus (FRIF_E_NIT_CH_B, DEM_EVENT_STATUS_PREPASSED) when none of these error bits is set.] ()

[SWS_FrIf_55120] [If the optional configuration parameter FRIF_E_SW_CH_A exists, then the channel status information shall be reported to DEM as Dem_SetEventStatus (FRIF_E_SW_CH_A, DEM_EVENT_STATUS_PREFAILED) when any of the error bits of a single controller (Channel A symbol window status data vSS!SyntaxError, vSS!Bviolation, vSS!TxConflict) is set or as Dem_SetEventStatus (FRIF_E_SW_CH_A, DEM_EVENT_STATUS_PREPASSED) when none of these error bits is set. | ()

[SWS_FrIf_65120] [If the optional configuration parameter FRIF_E_SW_CH_B exists, then the channel status information shall be reported to DEM as Dem_SetEventStatus (FRIF_E_SW_CH_B, DEM_EVENT_STATUS_PREFAILED) when any of the error bits of a single controller (Channel B symbol window status data vSS!SyntaxError, vSS!Bviolation vSS!TxConflict) is set or as Dem_SetEventStatus (FRIF_E_SW_CH_B, DEM_EVENT_STATUS_PREPASSED) when none of these error bits is set. | ()

[SWS_FrIf_75120] [If the optional configuration parameter FRIF_E_ACS_CH_A exists, then the channel status information shall be reported to DEM as Dem_SetEventStatus (FRIF_E_ACS_CH_A, DEM_EVENT_STATUS_PREFAILED) when any of the error bits of a single controller (Channel A aggregated channel status vSS!SyntaxError, vSS!ContentError, vSS!Bviolation, vSS!TxConflict) is set or as Dem_SetEventStatus (FRIF_E_ACS_CH_A,

DEM_EVENT_STATUS_PREPASSED) when none of these error bits is set. 1 ()

[SWS_FrIf_85120] [If the optional configuration parameter FRIF_E_ACS_CH_B exists, then the channel status information shall be reported to DEM as Dem_SetEventStatus (FRIF_E_ACS_CH_B, DEM_EVENT_STATUS_PREFAILED) when any of the error bits of a single controller (Channel B aggregated channel status vSS!SyntaxError, vSS!ContentError, vSS!Bviolation, vSS!TxConflict) is set or as Dem_SetEventStatus (FRIF_E_ACS_CH_B,

DEM_EVENT_STATUS_PREPASSED) when none of these error bits is set. J ()

[SWS_FrIf_95120] [If a loss of the JobList's synchronization (see <u>JobListAsyncFlag</u>) or a miss of execution was detected, the following steps shall be performed:

- 1. Get the global time (Frlf_GetGlobalTime())
 - If FrIf_GetGlobalTime() returns E_NOT_OK, stop here
 - If FrIf_GetGlobalTime() returns E_OK, continue with step 2
- 2. add some 'time buffer' (i.e. some timespan which takes jitter into account)
- 3. search the FlexRay Job List for the next job, i.e. that job with an invocation time greater than the current global time + 'time buffer'.
- 4. set the JobListPointer to that job and program the absolute timer with this job's invocation time (now the FlexRay Job List is synchronized again)
- 5. clear the JobListAsyncFlag
- 6. Enable the absolute timer interrupt

] ()

7.4 Implementation Requirements

[SWS_FrIf_05096] [The FlexRay Interface executable code (however, not the configuration used during runtime) shall be completely independent of the FlexRay Communication Controller(s) and the FlexRay Transceiver(s).] ()

[SWS_FrIf_05069] [The FrIf module shall support pre-compile time, link-time and post-build-time configuration.] (SRS_BSW_00404, SRS_BSW_00345)

[SWS_FrIf_05284] [The FrIf module shall implement link-time and post-build-time configuration data as read-only data structures.] ()

[SWS_FrIf_05285] [The FrIf module shall immediately reference link-time configuration data by the implementation, \rfloor ()

[SWS_FrIf_05078] [The FrIf module shall implement the API functions specified by the FrIf SWS as real C code functions and shall not implement the API functions as macros.] (SRS_BSW_00342)

Note: The rationale of SWS Frlf 05078 is to allow object code module integration.

[SWS_Frlf_05092] [The Frlf module shall support dynamic payload length for LPdus whose associated parameter FrlfAllowDynamicLSduLength (see <u>Frlf06049</u>) is set to true.

FrIfAllowDynamicLSduLength shall only be used for PDUs

- which are the only ones within the Frame Construction Plans, or
- for the last PDU within the Frame Construction Plans

] ()

7.5 Configuration description

[SWS_FrIf_05089] [The FrIf module shall provide an XML file that contains the data which is required for the SW identification (it shall contain the vendor identification, module ID and software version information), configuration and integration process. This file should describe vendor specific configuration parameters as well as it should contain recommended configuration parameter values.

The description of the configuration and initialization data itself is not part of this specification but very implementation specific. J (SRS_BSW_00171, SRS_BSW_00170, SRS_BSW_00334)

7.6 Data Communication via FlexRay

FlexRay in general is a deterministic time-driven communication system.

Each datum that should be transmitted or received has to be scheduled <u>at system</u> configuration time.

This even holds true for data that - from the application's point of view - are considered *event-driven*.

Note: When looking only at specific instances of the AUTOSAR FlexRay software modules running on a specific ECU it is not possible to "anticipate" the **exact point in time** when a certain FlexRay frame is being sent (or received, respectively) in the Dynamic Segment of the FlexRay Cycle.

[SWS_FrIf_05054] [The FrIf module shall define the resources (e.g. a buffer in the FlexRay Communication Controller or FlexRay Driver) needed for data transmission (or reception, respectively) at system configuration time specifically for data transmission (or reception, respectively). | (SRS_Fr_05056)

Note: There is no true spontaneous event-driven data communication on FlexRay. Even application data that occur at unpredictable points in time (i.e. "event-driven"), and that should be transmitted via FlexRay, have to be scheduled for transmission at system configuration time.

7.6.1 PDU Packing, PDU update bits, and Frame Construction Plans

In accordance with basic AUTOSAR rules, the API services that the <u>Frlf</u> module provides to upper layer <u>BSW</u> modules for data transmission and data reception are PDU-based.

[SWS_FrIf_05121] [The \underline{FrIf} module shall be capable of packing multiple PDUs into one FlexRay Frame.] ()

Rationale for <u>SWS_Frlf_05121</u>: Bus-independent AUTOSAR PDUs have a maximal length of 8 bytes, but according to [17] a FlexRay Frame can contain as many as 254 bytes of payload data.

Note: It is also allowed to define PDUs which are larger than 8 bytes. Please be aware that PDUs greater than 8 bytes are not bus independent any more!

[SWS_FrIf_05122] [The FrIf module shall take the information on how to pack PDUs into FlexRay Frames from the so-called Frame Construction Plans. The rules defining how to pack PDUs into FlexRay Frames are defined at system configuration time.] ()

[SWS_Frlf_05123] [The Frame Construction Plan shall be stored in the static configuration of the <u>Frlf</u> module (configuration parameter FrlfFrameStructure, see <u>Frlf05370</u>).] ()

[SWS_FrIf_05124] [If multiple PDUs are packed into a single FlexRay Frame and if the FrIf module recognizes the update of at least one of the contained PDUs, then the FrIf module shall transmit this FlexRay Frame.] ()

Note: As a result, the space associated with PDUs in this FlexRay Frame that have not been updated by the upper layer BSW module will also be transmitted. This does not necessarily mean that the previous values of those PDUs are transmitted. On the contrary, in case the parameter 'FrlfUnusedBitValue' does not exist, arbitrary values for those PDUs will be transmitted.

[SWS_Frlf_05723] In case the parameter 'FrlfUnusedBitValue' exists, all the unused bits within the Frame Construction Plan shall be set to the configured value 'FrlfUnusedBitValue' while assembling the frame on sender side.] ()

[SWS_FrIf_05725] [The FlexRayInterface shall ensure that unused spaces within the frame construction plan only contain deterministic values (instead of possible random data).

For this purpose, the value given by the parameter 'FrlfUnusedBitValue' shall be used to fill unused spaces with this value.] ()

[SWS_FrIf_05125] [It shall be possible to configure (configuration parameter FrIfPduUpdateBitOffset, see FrIf06071) for each PDU a dedicated PDU update bits in the FlexRay Frame. The FrIf module shall identify the position of the PDU update bits

for each PDU using the information stored in configuration parameter FrIfPduUpdateBitOffset. | ()

[SWS_FrIf_05056] [The receiving FrIf module shall evaluate the PDU Update-bit (if configured) to recognize the update of the PDU associated with this PDU update bits <code>] (SRS_Fr_05126)</code>

Rationale: In order for the receiving <u>Frlf</u> module to be able to determine which of the PDUs in a received FlexRay Frame have actually been updated by the upper layer BSW module (by a call of Frlf_Transmit()) on the transmitter side, additional update information, so called **PDU update bits** within the FlexRay Frame, shall be transmitted to the receiving <u>Frlf</u> module.

Note: A details description of the update bits handling is described in the Communication Operation, chapter 7.6.3.1 "TransmitWithDecoupledBufferAccess"

[SWS_FrIf_05126] [This PDU update bits shall be located at an arbitrary bit position in the Frame Construction Plan that is not occupied by any PDU.] ()

[SWS_Frlf_05127] [The configuration of update bitss for the PDUs and the definition of the location of the update bitss within the FlexRay Frame are performed at system configuration time [Configuration Parameter FrlfPduUpdateBitOffset, see Frlf06071]]

[SWS_FrIf_05128] [If no update bit is configured for a specific PDU, the FrIf module shall assume this PDU to be always valid and the FrIf module shall always indicate its reception to the upper layer BSW module on the receiver side. | ()

[SWS_FrIf_05758] [In case the parameter 'FrIfAllowDynamicLSduLength' exists and is set to TRUE for the associated frame triggering for reception, PDUs in non-received areas (PDU offset > actual L-SDU length) shall not be indicated to upper layer(s).

1 ()

[SWS_FrIf_05129] [If Transmission with Immediate Buffer Access is used, only one PDU is allowed per FlexRay Frame (L-SDU). | ()

Note: Therefore, PDU update bits can be omitted for Transmission with Immediate Buffer Access.

7.6.2 Dynamic PDU length

[SWS_FrIf_05093] In case the parameter 'FrIfAllowDynamicLSduLength' (see FrIf06049) is set to true for the associated frame triggering, the FrIf module passes the actual used L-PDU length to the driver (Fr_TransmitTxLPdu()), taking into account the following parameters for each PDU:

- the position of the PDU within the L-PDU
- the position of the update-bit information (if configured)

If FrIfImmediate equals TRUE, the actual length of the respective PDU shall be as passed via FrIf_Transmit().

If FrIfImmediate equals FALSE, the actual length of the respective PDU shall be as passed via <UL_TriggerTransmit>()

Note: If FrIfAllowDynamicLSduLength is set to false, the FrIf module just passes the length information according to the frame construction plan to the FlexRay driver.

[SWS_FrIf_05094] [The FrIf shall only indicate PDUs in received areas (PDU offset <= actual L-PDU length) to upper layer(s).] ()

7.6.3 AlwaysTransmit

Note: According to [17], a FlexRay CC might only support the so-called "continuous" transmission mode" where a message is transmitted continuously until the host explicitly invalidates the transmit buffer. If such a FlexRay CC is being used for transmission, and the receiving Frlf should still be able to determine which of the PDUs in a received FlexRay Frame have actually been updated by an upper layer BSW module on the transmitter side, a special mechanism is needed in the transmitting Frlf, called AlwaysTransmit (configuration parameter FrlfAlwaysTransmit, see ECUC_Frlf_06050). If AlwaysTransmit is enabled for an L-PDU that is transmitted using the Communication Operation DECOUPLED_TRANSMISSION, the FlexRay Driver's API service Fr TransmitTxLPdu() is always called for this L-PDU, independent from any PDUs in this L-PDU having been updated by an upper layer BSW module. This enables resetting the PDU update bits in the FlexRay CC's transmit buffer, even if none of the PDUs in the FlexRay Frame have actually been updated by an upper layer BSW module, and thus ensures the correct interpretation of the received Frame contents by the receiving Frlf.

Note: Since:

- in general, the transmit mode of a FlexRay <u>CC</u> can be configured ("continuous mode" / "single shot mode"), and
- AlwaysTransmit can be configured independently per L-PDU, and
- update bits can be configured independently per PDU,

the <u>Frlf</u> module can be tailored to exhibit exactly the behavior required by a certain use case,

however, it is the responsibility of the <u>System Designer</u> to select the correct configuration of all these parameters. An incorrect configuration will lead to undesired results.

7.6.4 Realization of the Time-Driven FlexRay Schedule

According to [17], a FlexRay <u>CC</u> is **not** required to provide mechanisms in hardware to ensure asynchronous access to its transmit and receive buffers e.g. by providing shadow buffers that may be accessed asynchronously by the AUTOSAR FlexRay software modules.

[SWS_FrIf_05130] The FrIf module shall call all functions accessing the transmit and receive buffers (i.e. performing data transmission or reception, respectively) synchronously (i.e. synchronized to the FlexRay Global Time) 1 ()

Rationale for <u>SWS_Frlf_05130</u>: The access of Frlf module functions to transmit and receive buffers only at well-defined points in time3 avoids concurrent access to the buffers by the hardware and the software.

Note: In order to provide this necessary synchronicity, the <u>Frlf</u> module defines for each Cluster a FlexRay Job List [Configuration Parameter FrlfJobList, see <u>Frlf05367</u>].

The Cluster's FlexRay Job List is executed by its Job List Execution Function (see 8.5.1) using an absolute timer [Configuration Parameter FrlfAbsTimerRef, see Frlf06063] of a FlexRay CC connected to the respective Cluster.

7.6.4.1 FlexRay Job List

[SWS_FrIf_05131] [Definition: A FlexRay Job List is a list of (maybe different) Communication Jobs sorted according to their respective execution start time.

Each Communication Job [Configuration Parameter FrlfJob, see <u>Frlf05368</u>] contains the following properties:

- Job start time by means of
 - FlexRay Communication Cycle [Configuration Parameter FrlfCycle, see Frlf06064]

³ In FlexRay Global Time

- Macrotick Offset within the Communication Cycle [Configuration Parameter FrlfMacrotick, see Frlf06065].
- A list of Communication Operations [Configuration Parameter FrlfCommunicationOperation, see <u>Frlf05369</u>] sorted according to a configurable Communication operation index [Configuration Parameter FrlfCommunicationOperationIdx, see <u>Frlf06068</u>]. The sorting order defines the order of execution of the Communication Operations within a FlexRay Communication Job.

] ()

[SWS_Frlf_05133] [The Frlf module shall call the respective Cluster's FlexRay Job List Execution Function to execute each FlexRay Communication Job at the execution start time assigned to that Communication Job] ()

[SWS_FrIf_05134] [The FrIf module shall process the actions determined by the Communication Operations assigned to each FlexRay Communication Job

Each Communication Operation (see <u>Frlf05369</u>) contains the following properties:

- Communication Operation Index [Configuration Parameter FrlfCommunicationOperationIdx, see ECUC_Frlf_06068], which determines the execution order of the Communication Operations.
- Communication Action [Configuration Parameter FrlfCommunicationAction, see Frlf06067], which specifies the actual action to perform (see 7.6.5):
 - o DECOUPLED_TRANSMISSION
 - TX CONFIRMATION
 - RECEIVE AND STORE
 - RX INDICATION
 - RECEIVE AND INDICATE
 - o PREPARE LPDU
- A reference to a frame triggering (L-PDU) which is associated with the Communication Action to perform [Configuration parameter FrlfLPduldx, see Frlf0605814. | ()

7.6.4.2 FlexRay Job List Execution Function

Since the Communication Schedule of each FlexRay Cluster is independent, there is one dedicated FlexRay Job List and one dedicated FlexRay Job List Execution Function for each FlexRay Cluster that is controlled by the FlexRay Interface.

The Copy Operation into/from the FlexRay CCs are scheduled within the FlexRay JobLists' communication operations

⁴ The LPDU is identified by a LPdu Index, which has a 1:1 association to a frame triggering for historical reasons. To obtain compatibility this configuration structure is not changed here. The L-PDU index is identified with a zero-based and dense index, which shall be used as the parameter Fr_LPduldx passed to the AUTOSAR FlexRay Driver when processing LPdus.

[SWS_FrIf_05136] [The API names of the FlexRay Job List Execution Functions shall obey the following pattern:

- Frlf_JobListExec_0() for Cluster # 0 (Frlf_Clstldx = 0)
- Frlf_JobListExec_1() for Cluster # 1 (Frlf_Clstldx = 1)
- Frlf_JobListExec_2() for Cluster # 2 (Frlf_Clstldx = 2)
- Frlf_JobListExec_3() for Cluster # 3 (Frlf_Clstldx = 3)
- ... and so on, if more than 4 FlexRay Clusters are supported.] ()

[SWS_FrIf_05137] [The FlexRay Job List Execution Function shall execute the Cluster's FlexRay Job List Jobs synchronously to the Cluster's global time (i.e. at well-defined points in time).] ()

[SWS_FrIf_05138] [Upon invocation, the FlexRay Job List Execution Function shall perform the following steps:

- 1. Retrieve the FlexRay Global Time from the FlexRay CC providing the Cluster's absolute timer interrupt.
- 2. If the FlexRay Global Time cannot be retrieved or the global time delay compared to the jobs start time is larger than a maximum delay [Configuration Parameter FrlfMaxlsrDelay, see Frlf06004], the execution of the FlexRay Job List is considered to be asynchronous to the FlexRay Global Time and thus the following actions are performed:
 - Either set a flag (JobListAsyncFlag) indicating that the execution of the FlexRay Job List of this Cluster is asynchronous or directly resynchronize the Joblist as described in SWS_Frlf_95120
 - If the JobListAsyncFlag was set, call the DET error FRIF E JLE SYNC
 - Disable absolute Timer Interrupt
 - Terminate the execution of this FlexRay Job.

Otherwise, the FlexRay Job List Execution Function continues with step 3.

- 3. Retrieve the ordered list of Communication Operations of the current Job pointed to by the current job-pointer.
- 4. Forward the current job-pointer to the next job-list entry. If the job-pointer was pointed at the end of the job-list, wrap around and set it to the first job-list entry.
- 5. Retrieve the execution start time of the job marked by the job-pointer and set the absolute timer to this job's start time in order to invoke the FlexRay Job List Execution Function again.
- 6. Execute the retrieved Communication Operations.

] ()

Note: In order to keep the runtime of the JLEF short, it is acceptable to implement the described functionality of the JLEF into a separate, high priority task which has to be activeded immediately in the JLEF.

7.6.5 Communication Operations

This chapter describes each Communication Operation that is executed within the Job List Execution Function.

7.6.5.1 TransmitWithDecoupledBufferAccess

[SWS_FrIf_05058] [The FrIf module shall be capable of Transmit Request queuing by using the TrigTxCounter.] (SRS_Fr_05130)

Note: Only the amount of transmit requests are stored, not the data itself.

[SWS_FrIf_05063] [If the related CC is in FrIf_State FRIF_STATE_ONLINE for a Communication Operation DECOUPLED_TRANSMISSION, then the Job List Execution Function shall execute this Communication Operation. Otherwise, the Job List Execution Function shall ignore this Communication Operation.] (SRS_Fr_05027)

[SWS_FrIf_05287] [For a Communication Operation DECOUPLED_TRANSMISSION the Job List Execution Function shall perform the following steps

- 1. Iterate over all PDUs contained in the FrlfFrameStructure (see Frlf05370) of the associated frame triggering of this Communication Operation and
 - a. Check whether TrigTxCounter is > 0 or FrlfNoneMode == true for the PDU. If not, clear the update-bit for this PDU [Configuration Parameter FrlfPduUpdateBitOffset, see Frlf06071] and proceed with the next PDU, otherwise continue with the following steps:
 - Decrement TrigTxCounter only if TrigTxCounter > 0. If the value of TrigTxCounter = 0, do not decrement.
 - ii. Call the upper layer's function _TriggerTransmit() with the associated PDUId (defined by the upper layer) and pass a pointer to a temporary buffer within the Frlf that assembles the L-SDU. The pointer shall consider the byte offset [Configuration Parameter FrlfPduOffset, see Frlf06070]] of the PDU within the frame. If _TriggerTransmit() returns E_NOT_OK, the TrigTxCounter value has to be rolled back to the previous value.
 - iii. Remember that a transmission for this PDU is pending if a transmission confirmation is needed for this PDU [Configuration Parameter FrlfConfirm, see Frlf06075] increment TxConfCounter, where the maximum value is limited by static configuration [Configuration Parameter FrlfCounterLimit, see Frlf06076]. If the FrlfCounterLimit has been reached, the FrlfCounterLimit value is kept and not incremented any more.
 - iv. Set the update-bit if configured for this PDU [Configuration Parameter FrlfPduUpdateBitOffset, see Frlf06071]. In case the API _TriggerTransmit() does not return E_OK, or the API Frlf_CancelTransmit ()for the corresponding PDU has been called, reset the update-bit to "not updated".

- If at least one PDU was requested for transmission or for at least one PDU FrlfNoneMode == true and _TriggerTransmit returned E_OK or the frame is configured to be always transmitted [Configuration Parameter FrlfAlwaysTransmit == true] then the FlexRay Driver's API service Fr_TransmitTxLPdu() is called:
 - a. Fr Ctrlldx is derived according to the indexing scheme descibed in 7.2
 - b. Fr_LPduldx is set to the configured L-PDU index [Configuration Parameter FrlfLPduldx, see Frlf06058] associated with the Communication Operation
 - c. Fr_LSduPtr is set to the temporary Frlf L-SDU assembling buffer.
 - d. Fr_LSduLength is set to the L-SDU length [Configuration Parameter FrlfLSduLength, see Frlf06054]
- In case the Driver's API Fr_TransmitTxLPdu() returned E_NOT_OK (indicating that the transmission failed) changes on TrigTxCounter and TxConfCounter must be rolled back (see 4. and 5.) for each PDU contained in the FlexRay L-SDU.

All described actions in <u>SWS_Frlf_05287</u> are depicted in detail in the sequence chart in chapter 9.1.2.

In case the parameter 'FrlfAllowDynamicLSduLength' exists and is set to TRUE for the associated frame triggering, the actual L-SDU length, that is passed to the driver (Fr_TransmitTxLPdu()), shall be determined (i.e. shortened as much as possible) taking into account the following for those PDUs only, which have been indicated via <UL_TriggerTransmit>():

- the position of the respective PDU within the L-SDU
- the actual length of the respective PDU as passed via <UL_TriggerTransmit>()
- the position of the update-bit of the respective PDU (if configured)

This ensures that on one hand all the needed information for disassembling the L-SDU is available on receiver side (PDU(s) itself and the corresponding update-bit(s) if configured), and on the other hand that the payload can be reduced as much as possible by talking the position of all the required data for disassembling contained in the frame construction plan into account when shortening the L-SDU to be passed to the driver. | ()

7.6.5.2 ProvideTxConfirmation

This Communication Operation provides a Tx confirmation and optionally checks the occurrence of a Tx conflict.

[SWS_FrIf_05064] [If the related CC is in FrIf_State FRIF_STATE_ONLINE for a Communication Operation TX_CONFIRMATION, then the Job List Execution Function shall execute this Communication Operation. Otherwise, the Job List Execution Function shall ignore this Communication Operation.] ()

[SWS_FrIf_05288] ["For a Communication Operation TX_CONFIRMATION the Job List Execution Function shall perform the following steps:

- 1. Call the FlexRay Driver's API function Fr_CheckTxLPduStatus():
 - a. Fr Ctrlldx is derived according to the indexing scheme descibed in 7.2

- b. Fr_LPduldx is set to the configured L-PDU buffer index [Configuration Parameter FrlfLPduldx, see <u>Frlf06058</u>] associated with the Communication Operation.
- If the transmission was performed (output parameter *Fr_TxLPduStatusPtr is set to FR_TRANSMITTED or FR_TRANSMITTED_CONFLICT) then iterate over all PDUs contained in the FrlfFrameStructure (see <u>Frlf05370</u>) of the associated frame triggering. If <u>TxConfCounter</u> for a PDU is 0 proceed with the next PDU, otherwise
 - a. If FrlfConfirm == true, call the upper layer's function <UL_TxConfirmation(E_OK)> with the asociated PDUId (defined by the upper layer).
 - b. If FrIfConfirm == true, decrement TxConfCounter.
- 3. If the API Fr_CheckTxLpduStatus() returns "FR_TRANSMITTED_CONFLICT" and the <UL_TxConflictNotification> is configured via FrIfTxConflictNotificationName (ECUC_FrIf_06122), call this function for the same LPduIdx.] ()

7.6.5.3 ReceiveAndStore

[SWS_FrIf_05289] [If the related CC is in FrIf_State FRIF_STATE_ONLINE for a Communication Operation RECEIVE_AND_STORE, then the Job List Execution Function shall execute this Communication Operation. Otherwise, the Job List Execution Function shall ignore this Communication Operation.] ()

[SWS_FrIf_05290] [For a Communication Operation RECEIVE_AND_STORE the Job List Execution Function shall perform the following steps:

- 1. Call the FlexRay Driver's API function Fr ReceiveRxLPdu():
 - a. Fr Ctrlldx is derived according to the indexing scheme descibed in 7.2
 - b. Fr_LPduldx is set to the configured L-PDU index [Configuration Parameter FrlfLPduldx, see Frlf06058] associated with the Communication Operation.
 - c. Fr_LSduPtr is set to a temporary buffer.
- 2. If a L-PDU was received (Output parameter *Fr_LPduStatusPtr != FR_NOT_RECEIVED) iterate over all PDUs contained in the FrlfFrameStructure (see Frlf05370) of the associated frame triggering and:
 - a. If an update bit was configured for the PDU [Configuration Parameter FrlfPduUpdateBitOffset, see <u>Frlf06071</u>] and the update bit for the PDU is not set, continue with the next PDU. Otherwise,
 - b. Copy the PDU Payload from the temporary buffer considering the PDU offset within the L-SDU [Configuration Parameter FrlfPduOffset, see Frlf06070] into a Frlf PDU-related static buffer.
 - c. Store the actual received PDU length
 - d. Mark the PDU-related static buffer as up-to-date.
- 3. if *Fr_LPduStatusPtr == FR_RECEIVED_MORE_DATA_AVAILABLE restart at number 1 again. Otherwise the communication operation has finished. | ()

7.6.5.4 ProvideRxIndication

[SWS_FrIf_05062] [If the related CC is in FrIf_State FRIF_STATE_ONLINE for a Communication Operation RX_INDICATION, then the Job List Execution Function shall execute this Communication Operation. Otherwise, the Job List Execution Function shall ignore this Communication Operation.] (SRS_Fr_05170)

[SWS_FrIf_05291] [For a Communication Operation RX_INDICATION the Job List Execution Function shall perform the following steps:

- 1. Iterate over all PDU-related static buffers of PDUs contained in the FrlfFrameStructure (see Frlf05370) of the associated frame triggering
- 2. If the PDU-related static buffer is marked as outdated, continue with the next PDU. Otherwise if the buffer is marked up-to-date,
 - a. Call the upper layer's function _RxIndication() with the PDU Id the receiving module expects and PduInfoPtr which contains the received data address and received data length.
 - b. Mark the PDU-related static buffer as outdated. 1 ()

7.6.5.5 ReceiveAndIndicate

[SWS_FrIf_05292] [If the related CC is in FrIf_State FRIF_STATE_ONLINE for a Communication Operation RECEIVE_AND_INDICATE, then the Job List Execution Function shall execute this Communication Operation. Otherwise, the Job List Execution Function shall ignore this Communication Operation.] ()

[SWS_FrIf_05293] [For a Communication Operation RECEIVE_AND_INDICATE the Job List Execution Function shall perform the following steps:

- 1) Calculate values for input parameters:
- a) Fr Ctrlldx is derived according to the indexing scheme descibed in 7.2
- b) Fr_LPduldx is set to the configured L-PDU index [Configuration Parameter FrlfLPduldx, see Frlf06058] associated with the Communication Operation.
- c) Fr LSduPtr is set to a temporary buffer.
- 2) Initialize ComOpLoopCounter to 0.
- 3) As long as ComOpLoopCounter < FrlfRxComOpMaxLoop do
 - a) Call Fr_ReceiveRxLPdu with the parameters calculated in 1)
 - b) If *Fr_LPduStatusPtr != FR_NOT_RECEIVED then continue at 3)c), otherwise the communication operation has finished.
 - c) For each Pdu contained in the FrlfFrameStructure (see Frlf05370) of the associated frame triggering do
 - -) If an update bit was configured for the PDU [Configuration Parameter FrlfPduUpdateBitOffset, see Frlf06071] and the update bit for the PDU is not set, continue with the next PDU. Otherwise
 - -) Call the upper layer's function _RxIndication() with the PDU Id the receiving module expects and a pointer to the Pdu-Info structure containing the Pdu length and a reference to the temporary buffer considering the PDU offset within the L-SDU [Configuration Parameter FrlfPduOffset, see Frlf06070]] as parameters.

d) if *Fr_LPduStatusPtr == FR_RECEIVED_MORE_DATA_AVAILABLE then increment

ComOpLoopCounter and restart at 3)a), otherwise the communication operation has finished.

] ()

7.6.5.6 PREPARE LPDU

The Communication Operation PREPARE_LPDU enables hardware optimization purposes (hardware buffer re-configuration)

[SWS_FrIf_05294] [The Communication Operation PREPARE_LPDU performs the following steps:

- 1. Call the FlexRay Driver's API function Fr_PrepareLPdu():
 - a. Fr Ctrlldx is derived according to the indexing scheme descibed in 7.2
 - b. Fr_LPduldx is set to the configured L-PDU index [Configuration Parameter FrlfLPduldx, see <u>Frlf06058</u>] associated with the Communication Operation.] ()

[SWS_Frlf_05061] [

The Communication Operation PREPARE_LPDU enables hardware optimization purposes. Its purpose is to enable certain FlexRay CC hardware resources (e.g. a CC's message buffer) to be prepared (configured) for the transmission/reception of a certain L-PDU.

This Communication Operation enables the FlexRay Driver to optimize the usage of hardware resources if available at appropriate point of times. However, it is the responsibility of the FlexRay Driver to decide and validate ressource allocation optimizations based on the PREPARE_LPDU Communication Operations. Practically the usage of this Communication Operation will introduce some runtime-overhead even if the FlexRay Driver does not use the opportunity for reconfiguration.

[SRS_Fr_05042]

7.6.3.7 FREE OP A

User-defined communication operation in order to support hardware specific or additional communication controller features to increase performance. Use cases are communication controllers with serial connection or DMA-transfers.

7.6.3.8 FREE_OP_B

User-defined communication operation in order to support hardware specific or additional communication controller features to increase performance. Use cases are communication controllers with serial connection or DMA-transfers.

7.6.6 Transmission with Immediate Buffer Access

[SWS_Frlf_15295] [

The FlexRay Job List Execution Function does not initiate transmission with immediate buffer access. Instead, the actions described here are carried out in the context of the Frlf_Transmit() API service, which in turn is called by an upper layer BSW module.] ()

[SWS_FrIf_05295] [The FlexRay Interface shall perform a PDU transmission with immediate buffer access (see 9.1), only if the following restriction regarding static configuration apply:

- The PDU must be **the only** PDU in a FlexRay Frame (L-SDU). It is **not** packed into a FlexRay Frame together with other PDUs (i.e., the mapping between this PDU and the respective L-SDU is a 1:1 association).
- The PDU must be located at the beginning of the L-SDU.
- There is no update-bit for immediate PDUs configured. 1 ()

[SWS_FrIf_05296] [If an upper layer module calls FrIf_Transmit() with TxPduId being configured for an immediate PDU, the AUTOSAR module FlexRay Interface shall perform the following steps for an immediate PDU transmission within the context of the FrIf_Transmit() API service Driver's API function Fr_TransmitTxLPdu():

- a. Fr_Ctrlldx is derived according to the indexing scheme descibed in 7.2
- b. Fr_LPduldx is set to the configured L-PDU index [Configuration Parameter FrlfLPduldx, see Frlf06058] associated with the TxPduld.
- c. Fr_LSduPtr is set to the Pdu Payload pointer contained in the PduInfoPtr passed as parameter to FrIf_Transmit.
- d. If the parameter FrlfAllowDynamicLSduLength=TRUE, the actual length of the respective PDU shall be as passed via Frlf Transmit().

In case the Driver's API Fr_TransmitTxLPdu() returned E_OK (indicating that the transmission request succeeded) the <u>TxConfCounter</u> is incremented for the respective PDU. The maximum value of <u>TxConfCounter</u> is limited by static configuration [Configuration Parameter FrlfCounterLimit, see Frlf06076]).

In case the Driver's API Fr_TransmitTxLPdu() returned E_NOT_OK do not modify the current counter value of TxConfCounter. | ()

Long Description:	This production error shall be issued when an error in ACS	
	on channel B was detected	
Recommended DTC:	N/A	
		The channel status information shall be reported to DEM as Dem_SetEventStatus (FRIF_E_SW_CH_B, DEM_EVENT_STATUS_PREFAILED) when any of the error bits of a single controller (Channel B symbol window status data vSS!SyntaxError, vSS!Bviolation, vSS!TxConflict) is set (SWS_Frlf_85120)
Detection Criteria:		The channel status information shall be reported to DEM as Dem_SetEventStatus (FRIF_E_ACS_CH_B, DEM_EVENT_STATUS_PREPASSED) when none of the error bits of a single controller (Channel B aggregated channel status vSS!SyntaxError, vSS!ContentError, vSS!Bviolation, vSS!TxConflict) is set (SWS_Frlf_85120)
Secondary Parameters:	N/A	
Time Required:	N/A	
Monitor Frequency	continuous	
MIL illumination:	N/A	

] ()

7.7.5 Extended Production Errors

There are no extended production errors.

7.8 Error Detection

[SWS_FrIf_05298] [If the FrIfDevErrorDetect switch is set to ON, all FrIf module API services other than FrIf_Init() and FrIf_GetVersionInfo() shall:

- not execute their normal operation,
- report to the DET module (using FRIF_E_NOT_INITIALIZED),
- and return E_NOT_OK,

unless the <u>Frlf</u> module has been initialized with a preceding call of Frlf_Init(). (SRS_BSW_00406)

8 API Service Specification

8.1 Imported types

In this chapter all types included from the following files are listed:

[SWS_Frlf_05001] [

Module	Imported Type
ComStack_Types	PduldType
	PduInfoType
Dem	Dem_EventIdType
	Dem_EventStatusType
Fr	Fr_ChannelType
	Fr_POCStatusType
	Fr_RxLPduStatusType
	Fr_TxLPduStatusType
FrTrcv FrTrcv_TrcvModeType	
	FrTrcv_TrcvWUReasonType
Std_Types	Std_ReturnType
	Std_VersionInfoType

J (SRS_BSW_00348, SRS_BSW_00353, SRS_BSW_00361, SRS_BSW_00304, SRS_BSW_00378)

8.2 Type Definitions

This chapter lists the data types that the FlexRay Interface defines.

8.2.1 Frlf_ConfigType

[SWS_Frlf_05301] [

Name:	FrIf_ConfigType
Туре:	Structure
Range:	Implementation specific
Description:	This type contains the implementation-specific post build time configuration structure. Only pointers of this type are allowed.

] ()

8.2.2 Frlf_StateType

[SWS_Frlf_05755] [

Name:	FrIf_StateType	
Type:	Enumeration	
Range:	FRIF_STATE_OFFLINE The FlexRay CC is not ready for communication, the FlexRay cluster is not synchronized.	
	FRIF_STATE_ONLINE The FlexRay CC is ready for communication, the FlexRay cluster is synchronized.	
Description:	Variables of this type are used to represent the FrIf_State of a FlexRay CC.	

]()

8.2.3 Frlf_StateTransitionType

[SWS_Frlf_05303] [

• · · · <u> </u>		
Name:	FrIf_StateTransitionType	
Туре:	Enumeration	
Range:	FRIF_GOTO_OFFLINE Literal for requesting transition into FRIF_STATE_OFFLINE	
	FRIF_GOTO_ONLINELiteral for requesting transition into FRIF_STATE_ONLINE state.	
Description:	Variables of this type are used to represent the FrIf_State of a FlexRay CC.	

] ()

8.3 Function Definitions

This is a list of API services (functions) the <u>FrIf</u> module provides to upper layer <u>BSW</u> modules.

8.3.1 Frlf_Init

[SWS_Frlf_05003] [

5// O_1 / II _00000]		
Service name:	Frlf_Init	
Syntax:	<pre>void FrIf_Init(const FrIf_ConfigType* FrIf_ConfigPtr)</pre>	
Service ID[hex]:	0x02	
Sync/Async:	Synchronous	
Reentrancy:	Non Reentrant	
Parameters (in):	FrIf_ConfigPtr Base pointer to the configuration structure of the FlexRay Interface.	
Parameters (inout):	None	
Parameters (out):	None	
Return value:	void	
Description:	Initializes the FlexRay Interface.	

J (SRS_BSW_00405, SRS_BSW_00101, SRS_BSW_00358, SRS_BSW_00414, SRS_Fr_05013)

Note:

The AUTOSAR ECU StateManager calls this FlexRay Interface API service with the address of the static configuration structure of the Frlf module in parameter Frlf_ConfigPtr.

[SWS Frif 05156] [The function Frif Init shall carry out the following actions:

- Configure the FlexRay Interface module: initialize the local memory space used to store the PDU data and the PDU properties and state variables and the FlexRay Interface State Machine.
- 2) The initialization of the memory space has to make sure that the PDU-related static buffer status is set to "outdated" ()

8.3.2 Frlf_ControllerInit

[SWS_Frlf_05004] [

3443_1111_03004]		
Service name:	Frlf_ControllerInit	
Syntax:	Std_ReturnType FrIf_ControllerInit(
	uint8 FrIf_CtrlIdx	
Service ID[hex]:	0x03	
Sync/Async:	Synchronous	
Reentrancy:	non reentrant for identical values of Frlf_Ctrlldx, reentrant for different values of Frlf_Ctrlldx	
Parameters (in):	FrIf_Ctrlldx Index of the FlexRay CC to address.	
Parameters (inout):	None	
Parameters (out):	None	
Return value:	Std_ReturnType E_OK: The call of the FlexRay Driver's API service has returned E_OK. E_NOT_OK: The call of the FlexRay Driver's API service has returned E_NOT_OK, or an error has been detected in development mode.	
Description:	Initialized a FlexRay CC.	

J (SRS_Fr_05031)

[SWS_Frlf_05158] [If parameter Frlf_Ctrlldx of Frlf_ControllerInit has an invalid value and if development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_ControllerInit shall report development error code FRIF E INV CTRL IDX to the Det ReportError service of the DET module. | ()

[SWS_FrIf_05159] [The function FrIf_ControllerInit shall wrap the FlexRay Driver API function Fr_ControllerInit() by:

- -1) Translating (based on static <u>Frlf</u> module configuration) the FlexRay <u>CC</u> index Frlf_Ctrlldx into a tuple (FlexRay Driver | Driver-specific <u>CC</u> index Fr_Ctrlldx).
- -2) Calling Fr_ControllerInit() of the determined FlexRay Driver module with the parameters determined as described above.] ()

[SWS_Frlf_05160] [Caveats of Frlf_ControllerInit: The FlexRay Interface module has to be initialized with a call of Frlf_Init() before this API service may be called, see SWS_Frlf_05003] ()

8.3.3 Frlf_SetAbsoluteTimer

[SWS Frlf 05021] [

Service name:	FrIf_SetAbsoluteTimer
Syntax:	Std_ReturnType FrIf_SetAbsoluteTimer(

	uint8 FrI	f CtrlIdx,	
	uint8 FrIf AbsTimerIdx,		
	uint8 FrIf Cycle,		
	uint16 Fr	If Offset	
)	_	
Service ID[hex]:	0x19		
Sync/Async:	Synchronous		
Reentrancy:	non reentrant for the same FlexRay CC, reentrant for different FlexRay CCs		
	Frlf_Ctrlldx	Index of the FlexRay CC to address.	
Doromotoro (in)	Frlf_AbsTimerldx Index of the absolute timer to address.		
Parameters (in):	FrIf_Cycle	FlexRay Cycle number to be set.	
	Frlf_Offset	Number of Macroticks to be set.	
Parameters	None		
(inout):			
Parameters (out):	None		
		E_OK: The call of the FlexRay Driver's API service has returned	
		E_OK.	
Return value:		E_NOT_OK: The call of the FlexRay Driver's API service has	
		returned E_NOT_OK, or an error has been detected in	
		development mode.	
Description:	Wraps the FlexRa	ay Driver API function Fr_SetAbsoluteTimer().	

1 ()

[SWS_Frlf_05234] [If parameter Frlf_Ctrlldx of Frlf_SetAbsoluteTimer has an invalid value and if development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_SetAbsoluteTimer shall report development error code FRIF_E_INV_CTRL_IDX to the Det_ReportError service of the DET module.] ()

[SWS_FrIf_05235] The function FrIf_SetAbsoluteTimer shall wrap This API service of the FlexRay Interface wraps the FlexRay Driver API function Fr SetAbsoluteTimer() by:

- -1) Translating (based on static Frlf module configuration) the FlexRay CC index Frlf_Ctrlldx into a tuple (FlexRay Driver | Driver-specific CC index Fr_Ctrlldx).
- -2) Setting parameters
- -3) Fr_AbsTimerldx to Frlf_AbsTimerldx
- -4) Fr_Cycle to Frlf_Cycle
- -5) Fr_Offset to Frlf_Offset
- -6) Calling Fr_SetAbsoluteTimer() of the determined FlexRay Driver module with the parameters determined as described above.] ()

[SWS_FrIf_05236] [Caveats of FrIf_SetAbsoluteTimer: The FlexRay Interface module has to be initialized with a call of FrIf_Init() before this API service may be called, see SWS_FrIf_05003. | ()

8.3.4 Frlf_EnableAbsoluteTimerIRQ

[SWS Frlf 05025] [

Service name:	Frlf_EnableAbsoluteTimerIRQ		
Syntax:	Std_ReturnTyp	e FrIf_EnableAbsoluteTimerIRQ(
	uint8 FrI	f_CtrlIdx,	
	uint8 FrI	f_AbsTimerIdx	
)		
Service ID[hex]:	0x1d		
Sync/Async:	Synchronous		
Reentrancy:	non reentrant for the same FlexRay CC, reentrant for different FlexRay CCs		
Paramatara (in)	Frlf_Ctrlldx	Index of the FlexRay CC to address.	
Parameters (in):	Frlf_AbsTimerldx Index of the absolute timer to address.		
Parameters	None		
(inout):			
Parameters (out):	None		
Return value:	_ ,,	E_OK: The call of the FlexRay Driver's API service has returned E_OK. E_NOT_OK: The call of the FlexRay Driver's API service has returned E_NOT_OK, or an error has been detected in development mode.	
Description:		ay Driver API function Fr_EnableAbsoluteTimerIRQ().	

1 ()

[SWS_Frlf_05246] [If parameter Frlf_Ctrlldx of Frlf_EnableAbsoluteTimerIRQ has an invalid value and if development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_EnableAbsoluteTimerIRQ shall report development error code FRIF_E_INV_CTRL_IDX to the Det_ReportError service of the DET module.] ()

[SWS_FrIf_05247] [The function FrIf_EnableAbsoluteTimerIRQ shall wrap the FlexRay Driver API function Fr_EnableAbsoluteTimerIRQ() by:

- 1. Translating (based on static Frlf module configuration) the FlexRay CC index Frlf_Ctrlldx into a tuple (FlexRay Driver | Driver-specific CC index Fr_Ctrlldx).
- 2. Setting parameters
 - Fr AbsTimerldx to Frlf AbsTimerldx
- 3. Calling Fr_EnableAbsoluteTimerIRQ() of the determined FlexRay Driver module with the parameters determined as described above.] ()

[SWS_Frlf_05248] [Caveats of Frlf_EnableAbsoluteTimerIRQ: The FlexRay Interface module has to be initialized with a call of Frlf_Init() before this API service may be called, see SWS_Frlf_05003.] ()

8.3.5 Frlf AckAbsoluteTimerIRQ

[SWS Frlf 05029] [

Service name:	Frlf_AckAbsoluteTimerIRQ	
Syntax:	<pre>Std_ReturnType FrIf_AckAbsoluteTimerIRQ(uint8 FrIf_CtrlIdx, uint8 FrIf_AbsTimerIdx)</pre>	

Service ID[hex]:	0x21	
Sync/Async:	Synchronous	
Reentrancy:	non reentrant for the same FlexRay CC, reentrant for different FlexRay CCs	
Dovernotove (in)	Frlf_Ctrlldx	Index of the FlexRay CC to address.
Parameters (in):	Frlf_AbsTimerIdx	Index of the absolute timer to address.
Parameters	None	
(inout):		
Parameters (out):	None	
Return value:	_ ,,	E_OK: The call of the FlexRay Driver's API service has returned E_OK. E_NOT_OK: The call of the FlexRay Driver's API service has returned E_NOT_OK, or an error has been detected in development mode.
Description:	Wraps the FlexRay Driver API function Fr_AckAbsoluteTimerIRQ()	

I()

[SWS_Frlf_05258] [If parameter Frlf_Ctrlldx of Frlf_AckAbsoluteTimerIRQ has an invalid value and if development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_AckAbsoluteTimerIRQ shall report development error code FRIF_E_INV_CTRL_IDX to the Det_ReportError service of the DET module.] ()

[SWS_FrIf_05259] [The function FrIf_AckAbsoluteTimerIRQ shall wrap the FlexRay Driver API function Fr_AckAbsoluteTimerIRQ() by:

- 1. Translating (based on static Frlf module configuration) the FlexRay CC index Frlf_Ctrlldx into a tuple (FlexRay Driver | Driver-specific CC index Fr_Ctrlldx).
- 2. Setting parameters
 - Fr AbsTimerldx to Frlf AbsTimerldx
- 3. Calling Fr_AckAbsoluteTimerIRQ() of the determined FlexRay Driver module with the parameters determined as described above. | ()

[SWS_Frlf_05260] [Caveats of Frlf_AckAbsoluteTimerIRQ: The FlexRay Interface module has to be initialized with a call of Frlf_Init() before this API service may be called, see SWS_Frlf_05003.] ()

8.3.6 Frlf_StartCommunication

[SWS_Frlf_05005] [

Service name:	FrIf_StartCommunication	
Syntax:	<pre>Std_ReturnType FrIf_StartCommunication(uint8 FrIf_CtrlIdx)</pre>	
Service ID[hex]:	0x04	
Sync/Async:	Asynchronous	
	non reentrant for identical values of Frlf_Ctrlldx, reentrant for different values of Frlf_Ctrlldx	
Parameters (in):	Frlf_Ctrlldx	Index of the FlexRay CC to address.
Parameters (inout):	None	

Parameters (out):	None	
Return value:	td_ReturnType E_OK: The call of the FlexRay Driver's API service has returned E_OK. E_NOT_OK: The call of the FlexRay Driver's API service has returned E_NOT_OK, or an error has been detected in development mode.	
Description:	Wraps the FlexRay Driver API function Fr_StartCommunication().	

| (SRS_Fr_05015)

[SWS_Frlf_05161] [If parameter Frlf_Ctrlldx of Frlf_StartCommunication has an invalid value and if development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_StartCommunication shall report development error code FRIF_E_INV_CTRL_IDX to the Det_ReportError service of the DET module.] ()

[SWS_FrIf_05162] [The function FrIf_StartCommunication shall wrap the FlexRay Driver API function Fr_StartCommunication() by:

- -1) Translating (based on static Frlf module configuration) the FlexRay CC index Frlf_Ctrlldx into a tuple (FlexRay Driver | Driver-specific CC index Fr_Ctrlldx).
- -2) Calling Fr_StartCommunication() of the determined FlexRay Driver module with the parameters determined as described above. | ()

[SWS_Frlf_05163] [Caveats of Frlf_StartCommunication: The FlexRay Interface module has to be initialized with a call of Frlf_Init() before this API service may be called, see SWS_Frlf_05003] ()

8.3.7 Frlf_HaltCommunication

[SWS_Frlf_05006] [

Service name:	FrIf_HaltCommunication	
Syntax:	Std ReturnType FrIf HaltCommunication(
	uint8 FrIf_CtrlIdx	
)	
Service ID[hex]:	0x05	
Sync/Async:	Asynchronous	
Reentrancy:	non reentrant for identical values of Frlf_Ctrlldx, reentrant for different values of	
	Frlf_Ctrlldx	
Parameters (in):	Frlf_Ctrlldx Index of the FlexRay CC to address.	
Parameters	None	
(inout):		
Parameters (out):	None	
	Std_ReturnType E_OK: The call of the FlexRay Driver's API service has returned	
	E_OK.	
Return value:	E_NOT_OK: The call of the FlexRay Driver's API service has	
	returned E_NOT_OK, or an error has been detected in	
	development mode.	
Description:	Wraps the FlexRay Driver API function Fr_HaltCommunication().	

(SRS_BSW_00336, SRS_Fr_05063)

[SWS_FrIf_05164] [If parameter FrIf_Ctrlldx of FrIf_HaltCommunication has an invalid value and if development error detection is enabled (i.e. FrIfDevErrorDetect equals ON), the function FrIf_HaltCommunication shall report development error code FRIF_E_INV_CTRL_IDX to the Det_ReportError service of the DET module.] ()

[SWS_FrIf_05165] [The function FrIf_HaltCommunication shall wrap the FlexRay Driver API function Fr_HaltCommunication() by:

- -1) Translating (based on static Frlf module configuration) the FlexRay CC index Frlf_Ctrlldx into a tuple (FlexRay Driver | Driver-specific CC index Fr_Ctrlldx).
- -2) Calling Fr_HaltCommunication() of the determined FlexRay Driver module with the parameters determined as described above.] ()

[SWS_Frlf_05166] [Caveats of Frlf_HaltCommunication: The FlexRay Interface module has to be initialized with a call of Frlf_Init() before this API service may be called, see SWS_Frlf_05003] ()

8.3.8 Frlf_AbortCommunication

[SWS_Frlf_05007] [

[3443 _1111_03007	' 4		
Service name:	FrIf_AbortCommunication		
Syntax:	<pre>Std_ReturnType FrIf_AbortCommunication(uint8 FrIf_CtrlIdx)</pre>		
Service ID[hex]:	0x06		
Sync/Async:	Synchronous		
Reentrancy:	non reentrant for identical values of Frlf_Ctrlldx, reentrant for different values of Frlf_Ctrlldx		
Parameters (in):	FrIf_Ctrlldx Index of the FlexRay CC to address.		
Parameters (inout):	None		
Parameters (out):	None		
Return value:	Std_ReturnType E_OK: The call of the FlexRay Driver's API service has returned E_OK. E_NOT_OK: The call of the FlexRay Driver's API service has returned E_NOT_OK, or an error has been detected in development mode.		
Description:	Wraps the FlexRay Driver API function Fr_AbortCommunication().		

(SRS_Fr_05016)

[SWS_FrIf_05167] [If parameter FrIf_Ctrlldx of FrIf_AbortCommunication has an invalid value and if development error detection is enabled (i.e. FrIfDevErrorDetect

equals ON), the function Frlf_AbortCommunication shall report development error code FRIF_E_INV_CTRL_IDX to the Det_ReportError service of the DET module.] ()

[SWS_FrIf_05168] [The function FrIf_AbortCommunication shall wrap the FlexRay Driver API function Fr AbortCommunication() by:

- -1) Translating (based on static Frlf module configuration) the FlexRay CC index Frlf_Ctrlldx into a tuple (FlexRay Driver | Driver-specific CC index Fr_Ctrlldx).
- -2) Calling Fr_AbortCommunication() of the determined FlexRay Driver module with the parameters determined as described above. | ()

[SWS_Frlf_05169] [Caveats of Frlf_AbortCommunication: The FlexRay Interface module has to be initialized with a call of Frlf_Init() before this API service may be called, see SWS_Frlf_05003] ()

8.3.9 Frlf_GetState

ISWS Frlf 051701

5W9_FIII_03170]			
Service name:	FrIf_GetState		
Syntax:	<pre>Std_ReturnType FrIf_GetState(uint8 FrIf_ClstIdx, FrIf_StateType* FrIf_StatePtr)</pre>		
Service ID[hex]:	0x07		
Sync/Async:	Synchronous		
Reentrancy:	Reentrant		
Parameters (in):	Frlf_Clstldx	Index of the cluster addressed.	
Parameters (inout):	None		
Parameters (out):	_	Pointer to a memory location where the retrieved FrlfState will be stored	
Return value:		E_OK: Function was successfully executed. State transition request was accepted. E_NOT_OK: Function execution failed due to detected errors. State transition request was not accepted.	
Description:	Get current Frlf s	state.	

I()

[SWS_Frlf_05171] [If parameter Frlf_Clstldx of Frlf_GetState has an invalid value and if development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_GetState shall report development error code

FRIF E INV CLST IDX to the Det ReportError service of the DET module. | ()

[SWS_FrIf_05172] [If parameter FrIf_StatePtr of FrIf_GetState equals NULL_PTR and if development error detection is enabled (i.e. FrIfDevErrorDetect equals ON),

the function FrIf_GetState shall report development error code FRIF_E_PARAM_POINTER to the Det_ReportError service of the DET module.] ()

[SWS_Frlf_05173] [Caveats of Frlf_GetState: The FlexRay Interface module has to be initialized with a call of Frlf_Init() before this API service may be called, see SWS Frlf_05003 | ()

8.3.10 Frlf SetState

[SWS Frlf 05174] [

<u> </u>	71		
Service name:	Frlf_SetState		
Syntax:	<pre>Std_ReturnType FrIf_SetState(uint8 FrIf_ClstIdx, FrIf_StateTransitionType FrIf_StateTransition)</pre>		
Service ID[hex]:	0x08		
Sync/Async:	Synchronous		
Reentrancy:	Non Reentrant		
Parameters (in):	FrIf_Clstldx Index of the cluster addressed. FrIf_StateTransition Requested FrIf state transition.		
Parameters (inout):	None		
Parameters (out):	None		
Return value:	Std_ReturnType		
Description:	Requests Frlf state machine transition.		

1 ()

[SWS_Frlf_05175] [If parameter Frlf_Clstldx of Frlf_SetState has an invalid value and if development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_SetState shall report development error code FRIF_E_INV_CLST_IDX to the Det_ReportError service of the DET module.] ()

[SWS_Frlf_05037] [If parameter Frlf_StateTransition of Frlf_SetState has an invalid value and if development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_SetState shall report development error code FRIF_E_INV_FRIF_STATE to the Det_ReportError service of the DET module.] ()

[SWS_FrIf_05176] [Caveats of FrIf_SetState: The FlexRay Interface module has to be initialized with a call of FrIf_Init() before this API service may be called, see SWS_FrIf_05003] ()

8.3.11 Frlf_SetWakeupChannel

[SWS_Frlf_05010] [

Service name:	Frlf_SetWakeupChannel	
Syntax:	<pre>Std_ReturnType FrIf_SetWakeupChannel(uint8 FrIf_CtrlIdx, Fr_ChannelType FrIf_ChnlIdx)</pre>	
Service ID[hex]:	0x09	
Sync/Async:	Synchronous	
Reentrancy:	non reentrant for identical values of FrIf_Ctrlldx, reentrant for different values of FrIf_Ctrlldx	
	Frlf_Ctrlldx	Index of the FlexRay CC to address.
Parameters (in):		Index of the FlexRay Channel to address in scope of the FlexRay controller Frlf_Ctrlldx.
Parameters (inout):	None	
Parameters (out):	None	
Return value:		E_OK: The call of the FlexRay Driver's API service has returned E_OK. E_NOT_OK: The call of the FlexRay Driver's API service has returned E_NOT_OK, or an error has been detected in development mode.
Description:	Wraps the FlexRay Driver API function Fr_SetWakeupChannel(). The enum value "FR_CHANNEL_AB" shall not be used.	

I()

[SWS_FrIf_05500] [If parameter FrIf_Ctrlldx of FrIf_SetWakeupChannel has an invalid value and if development error detection is enabled (i.e. FrIfDevErrorDetect equals ON), the function FrIf_SetWakeupChannel shall report development error code FRIF_E_INV_CTRL_IDX to the Det_ReportError service of the DET module.] ()

[SWS_FrIf_05177] [If parameter FrIf_ChnIldx of FrIf_SetWakeupChannel has an invalid value and if development error detection is enabled (i.e. FrIfDevErrorDetect equals ON), the function FrIf_SetWakeupChannel shall report development error code FRIF_E_INV_CHNL_IDX to the Det_ReportError service of the DET module. J

[SWS_FrIf_05178] [The function FrIf_SetWakeupChannel shall wrap the FlexRay Driver API function Fr_SetWakeupChannel() by:

- -1) Translating (based on static Frlf module configuration) the FlexRay CC index Frlf_Ctrlldx into a tuple (FlexRay Driver | Driver-specific CC index Fr Ctrlldx).
- -2) Setting parameters Fr_Chnlldx to Frlf_Chnlldx
- -3) Calling Fr_SetWakeupChannel() of the determined FlexRay Driver module with the parameters determined as described above. | ()

[SWS_FrIf_05179] [Caveats of FrIf_SetWakeupChannel: The FlexRay Interface module has to be initialized with a call of FrIf_Init() before this API service may be called, see SWS_FrIf_05003.] ()

8.3.12 Frlf_SendWUP

[SWS_Frlf_05011] [

[3773_1111_0301	<u>•1 </u>		
Service name:	FrIf_SendWUP		
Syntax:	<pre>Std_ReturnType FrIf_SendWUP(uint8 FrIf_CtrlIdx)</pre>		
Service ID[hex]:	0x0a		
Sync/Async:	Asynchronous		
Reentrancy:	non reentrant for identical values of FrIf_Ctrlldx, reentrant for different values of FrIf_Ctrlldx		
Parameters (in):	FrIf_Ctrlldx Index of the FlexRay CC to address.		
Parameters (inout):	None		
Parameters (out):	None		
Return value:	Std_ReturnType E_OK: The call of the FlexRay Driver's API service has returned E_OK. E_NOT_OK: The call of the FlexRay Driver's API service has returned E_NOT_OK, or an error has been detected in development mode.		
Description:	Wraps the FlexRay Driver API function Fr_SendWUP().		

| (SRS_Fr_05018)

[SWS_Frlf_05180] [If parameter Frlf_Ctrlldx of Frlf_SendWUP has an invalid value and if development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_SendWUP shall report development error code FRIF E INV CTRL IDX to the Det ReportError service of the DET module. | ()

[SWS_Frlf_05018] [

<u> </u>			
Service name:	FrIf_GetMacroticksPerCycle		
Syntax:	uint16 FrIf_GetMacroticksPerCycle(uint8 FrIf_CtrlIdx)		
Service ID[hex]:	0x11		

Sync/Async:	Synchronous	
Reentrancy:	Reentrant	
Parameters (in):	Frlf_Ctrlldx	Index of the FlexRay CC to address.
Parameters	None	
(inout):		
Parameters (out):	None	
Return value:	uint16	Number of Macroticks per Cycle
Description:	Retrieves the amou	nt of Macroticks per Cycle

| ()

[SWS_Frlf_05203] [If parameter Frlf_Ctrlldx of Frlf_GetMacroticksPerCycle has an invalid value and if development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_GetMacroticksPerCycle shall report development error code FRIF_E_INV_CTRL_IDX to the Det_ReportError service of the DET module.

This API service of the FlexRay Interface retrieves the number of Macroticks per FlexRay Cycle of the FlexRay Cluster with index Frlf_Ctrlldx out of the static configuration.] ()

[SWS_FrIf_05204] [Caveats of FrIf_GetMacroticksPerCycle: The FlexRay Interface module has to be initialized with a call of FrIf_Init() before this API service may be called, see SWS_FrIf_05003.] ()

8.3.17 Frlf_GetMacrotickDuration

[SWS_Frlf_05019] [

Service name:	FrIf_GetMacrotickDuration		
Syntax:	uint16 FrIf GetMacrotickDuration(
	uint8 FrIf	_CtrlIdx	
)		
Service ID[hex]:	0x31		
Sync/Async:	Synchronous	Synchronous	
Reentrancy:	Reentrant		
Parameters (in):	Frlf_Ctrlldx	Index of the FlexRay CC to address.	
Parameters	None		
(inout):			
Parameters (out):	None		
Return value:	uint16	Duration of one Macrotick in ns	
Description:	Retrieves the Duration of a Macrotick in ns		

I()

[SWS_Frlf_05191] [If parameter Frlf_Ctrlldx of Frlf_GetMacrotickDuration: has an invalid value and if development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_GetMacrotickDuration: shall report development error code FRIF_E_INV_CTRL_IDX to the Det_ReportError service of the DET module.

This API service of the FlexRay Interface retrieves duration of one Macrotick in nanoseconds of the FlexRay Cluster with index Frlf_Ctrlldx out of the static configuration.] ()

[SWS_FrIf_05754] [Caveats of FrIf_GetMacrotickDuration: The FlexRay Interface module has to be initialized with a call of FrIf_Init() before this API service may be called, see SWS_FrIf_05003] ()

8.3.18 Frlf_Transmit

[SWS_Frlf_05033] [

[<u>3442_F111_0303</u> ,	~]		
Service name:	FrIf_Transmit		
Syntax:	<pre>Std_ReturnType FrIf_Transmit(PduIdType TxPduId, const PduInfoType* PduInfoPtr)</pre>		
Service ID[hex]:	0x49		
Sync/Async:	Synchronous		
Reentrancy:	Reentrant for different Pdulds. Non reentrant for the same Pduld.		
Parameters (in):	TxPduld Identifier of the PDU to be transmitted PduInfoPtr Length of and pointer to the PDU data and pointer to MetaData.		
Parameters (inout):	None		
Parameters (out):	None		
Return value:	Std_ReturnType E_OK: Transmit request has been accepted. E_NOT_OK: Transmit request has not been accepted.		
Description:	Requests transmission of a PDU.		

I()

[SWS_Frlf_05318]

FrIf_Transmit() shall return E_NOT_OK in case the FrIf's state is FRIF_STATE_OFFLINE.

[SWS_FrIf_05205] [If parameter TxPduId of FrIf_Transmit has an invalid value and if development error detection is enabled (i.e. FrIfDevErrorDetect equals ON), the function FrIf_Transmit shall report development error code FRIF_E_INV_TXPDUID to the Det_ReportError service of the DET module.] ()

[SWS_FrIf_05207] [If the parameter FrIfAllowedDynamicSduLength is set to false and/or if the parameter FrIfImmediate is set to true for the passed TxPduId, the passed SduDataPtr in parameter PduInfoPtr of FrIf_Transmit shall be checked for NULL_PTR in case development error detection is enabled (i.e. FrIfDevErrorDetect equals ON). If in this case the passed SduDataPtr equals NULL_PTR, the function FrIf_Transmit shall report the development error code FRIF_E_PARAM_POINTER to the Det_ReportError service of the DET module.

In case of decoupled transmission the PDU with index TxPduld is **not yet** passed to the underlying FlexRay Driver module for transmission. Frlf only remembers the PDU's transmission request (increment TrigTxCounter5). This decoupling mechanism between the call of Frlf_Transmit() and the execution of the FrlfCommunicationAction (see Frlf06067) has some implications:

- The upper layer BSW module may operate asynchronously to the FlexRay Communication System and thus may call FrIf_Transmit() at any point in time.
- The upper layer <u>BSW</u> module must permanently buffer the PDU's payload date and must be able to handle a call of its <UL_TriggerTransmit>() API service at (from the <u>BSW</u>'s point of view) any arbitrary point in time.] ()

[SWS_Frlf_05208] In case of immediate transmission the function Frlf_Transmit shall pass the PDU (single PDU, no Update bit) to the underlying FlexRay Driver module immediately for transmission.] ()

[SWS_Frlf_05757] [

"If parameter TxPduId is configured for an immediate PDU, and if configuration parameter FrIfAllowDynamicLSduLength is set to FALSE, the provided length in PduInfoPtr shall be compared with the static configured length (see ECUC_FrIf_06054).

If the length information does not match, Frlf_Transmit() shall return E_NOT_OK and shall not perform the immediate PDU transmission. If development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_Transmit() shall report development error code FRIF_E_INV_PDULENGTH to the Det_ReportError service of the DET module. | ()

[SWS_FrIf_05209] [Caveats of FrIf_Transmit: The FlexRay Interface module has to be initialized with a call of FrIf_Init() before this API service may be called, see SWS_FrIf_05003] ()

8.3.19 Frlf_SetTransceiverMode

[SWS Frlf 05034] [

Service name:	FrIf_SetTransceiverMode		
Syntax:	Std_ReturnType FrIf_SetTransceiverMode(uint8 FrIf_CtrlIdx, Fr_ChannelType FrIf_ChnlIdx, FrTrcv_TrcvModeType FrIf_TrcvMode)		
Service ID[hex]:	0x13		
Sync/Async:	Synchronous		
Reentrancy:	Reentrant		
Parameters (in):		Index of the FlexRay CC to address. Index of the FlexRay Channel to address in scope of the FlexRay	

⁵ Limited by static configuration [Configuration Parameter FrlfCounterLimit, see Frlf06076]

71 of 157

Document ID 027: AUTOSAR_SWS_FlexRayInterface

		controller Frlf_Ctrlldx.
	Frlf_TrcvMode	Transceiver mode to be set.
Parameters (inout):	None	
Parameters (out):	None	
Return value:		E_OK: The call of the FlexRay Transceiver Driver's API service has returned E_OK. E_NOT_OK: The call of the FlexRay Transceiver Driver's API service has returned E_NOT_OK.
	Wraps the FlexRay Transceiver Driver API function FrTrcv_SetTransceiverMode(). The enum value "FR_CHANNEL_AB" shall not be used.	

(SRS_Fr_05039)

[SWS_Frlf_05210] [If parameter Frlf_Ctrlldx of Frlf_SetTransceiverMode has an invalid value and if development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_SetTransceiverMode shall report development error code FRIF E INV CTRL IDX to the Det ReportError service of the DET module. | ()

[SWS_Frlf_05211] [If parameter Frlf_Chnlldx of Frlf_SetTransceiverMode has an invalid value and if development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_SetTransceiverMode shall report development error code FRIF_E_INV_CHNL_IDX to the Det_ReportError service of the DET module.]

[SWS_Frlf_05212] [The function Frlf_SetTransceiverMode shall wrap the FlexRay Transceiver Driver API function FrTrcv_SetTransceiverMode() by:

- Translating (based on static <u>Frlf</u> module configuration) the tuple (FlexRay <u>CC</u> index Frlf_Ctrlldx | FlexRay Channel index Frlf_Chnlldx) into a tuple (FlexRay Transceiver Driver | Driver-specific Transceiver index FrTrcv_Trcvldx).
- 2. Setting parameters
 - FrTrcv_TrcvMode to Frlf_TrcvMode
- 3. Calling FrTrcv_SetTransceiverMode() of the determined FlexRay Driver module with the parameters determined as described above. | ()

[SWS_Frlf_05213] | Caveats of Frlf_SetTransceiverMode: The FlexRay Interface module has to be initialized with a call of Frlf_Init() before this API service may be called, see SWS_Frlf_05003. | ()

8.3.26 Frlf_GetCycleLength

[SWS_Frlf_05239] [

Service name:	Frlf_GetCycleLength	
Syntax:	<pre>uint32 FrIf_GetCycleLength(uint8 FrIf_CtrlIdx)</pre>	
Service ID[hex]:	0x3a	
Sync/Async:	Synchronous	
Reentrancy:	Non Reentrant for the same FlexRay CC, reentrant for different FlexRay CCs	
Parameters (in):	Frlf_Ctrlldx Index of the FlexRay CC to address.	
Parameters (inout):	None	

Parameters (out):	None	
Return value:	uint32 Time in unit of nanoseconds	
•	This API returns the configured time of the configuration parameter "GdCycle" in nanoseconds for the FlexRay controller with index Frlf Ctrlldx.	

I()

[SWS_Frlf_05237] [If parameter Frlf_Ctrlldx of Frlf_GetCycleLength has an invalid value and if development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_GetCycleLength shall report development error code FRIF_E_INV_CTRL_IDX to the Det_ReportError service of the DET module.] ()

[SWS_FrIf_05238] [Caveats of FrIf_GetCycleLength: The FlexRay Interface module has to be initialized with a call of FrIf_Init() before this API service may be called, see SWS_FrIf_05003.] ()

8.4 Optional Function Definitions

8.4.1 Frlf_AllSlots

[SWS Frlf 05020] [

<u> </u>	1	
Service name:	FrIf_AllSlots	
Syntax:	Std ReturnType FrIf AllSlots(
	uint8 FrIf CtrlIdx	
)	
Service ID[hex]:	0x33	
Sync/Async:	Synchronous	
Reentrancy:	non reentrant	
Parameters (in):	FrIf_Ctrlldx Index of the FlexRay CC to address.	
Parameters	None	
(inout):		
Parameters (out):	None	
	Std_ReturnType E_OK: The call of the	FlexRay Driver's API service has returned
	E_OK.	
Return value: E_NOT_OK: The call of the FlexRay Driver's API set		of the FlexRay Driver's API service has
	returned E_NOT_OK,	or an error has been detected in
	development mode.	
Description:	Wraps the FlexRay Driver API function Fr_AllSlots	
Description:	Wraps the FlexRay Driver API function Fr_AllSlots	

1 ()

[SWS_Frlf_05412] [The function Frlf_AllSlots shall be pre compile time configurable ON/OFF by the configuration parameter FrlfAllSlotsSupport (derived from configuration parameter FrlfAllSlotsSupport, see ECUC_Frlf_06108)] ()

[SWS_FrIf_05706] [If development error detection for the FrIf module is enabled: if the function FrIf_AllSlots is called before the FrIf was initialized successfully, the function FrIf_AllSlots shall raise the development error FRIF_E_NOT_INITIALIZED and return E_NOT_OK.] ()

[SWS_Frlf_05707] [If development error detection for the Fr module is enabled: the function Frlf_AllSlots shall check the parameter Frlf_Ctrlldx for being valid. If Frlf_Ctrlldx is invalid, the function Frlf_AllSlots shall raise the development error FRIF_E_INV_CTRL_IDX and return E_NOT_OK.] ()

8.4.2 Frlf_GetChannelStatus

[SWS_Frlf_05030] [

Service name:	FrIf_GetChannelStatus	
Syntax:	<pre>Std_ReturnType FrIf_GetChannelStatus(uint8 FrIf_CtrlIdx, uint16* FrIf_ChannelAStatusPtr, uint16* FrIf_ChannelBStatusPtr)</pre>	
Service ID[hex]:	0x26	
Sync/Async:	Synchronous	
Reentrancy:	Non Reentrant for the same device	
Parameters (in):	FrIf_Ctrlldx Index of FlexRay CC within the context of the FlexRay Interface.	
Parameters (inout):	None	
Parameters (out):	FrIf_ChannelAStatusPtr Address where the bitcoded channel A status information shall be stored.	
	FrIf_ChannelBStatusPtr Address where the bitcoded channel B status information shall be stored.	
Return value:	Std_ReturnType	
Description:	Wraps the FlexRay Driver API function Fr_GetChannelStatus() and gets the channel status information.	

I()

[SWS_Frlf_05413] [The function Frlf_GetChannelStatus shall be pre compile time configurable ON/OFF by the configuration parameter FrlfGetGetChannelStatusSupport (derived from configuration parameter FrlfGetGetChannelStatusSupport, see ECUC_Frlf_06105)] ()

[SWS_FrIf_05708] [If development error detection for the FrIf module is enabled: if the function FrIf_GetChannelStatus is called before the FrIf module was initialized successfully, the function FrIf_GetChannelStatus shall raise the development error FRIF_E_NOT_INITIALIZED and return E_NOT_OK.] ()

[SWS_FrIf_05709] [If development error detection for the FrIf module is enabled: the function FrIf_GetChannelStatus shall check the parameter FrIf_Ctrlldx for being valid. If FrIf_Ctrlldx is invalid, the function FrIf_GetChannelStatus shall raise the development error FRIF_E_INV_CTRL_IDX and return E_NOT_OK.] ()

8.4.3 Frlf_GetClockCorrection

[SWS Frlf 05071] [

<u>[3WS_FHI_U5U7</u>	<u>']</u>		
Service name:	FrIf_GetClockCorrection		
Syntax:	<pre>Std_ReturnType FrIf_GetClockCorrection(uint8 FrIf_CtrlIdx, sint16* FrIf_RateCorrectionPtr, sint32* FrIf_OffsetCorrectionPtr)</pre>		
Service ID[hex]:	0x29		
Sync/Async:	Synchronous		
Reentrancy:	Non Reentrant for the same device		
Parameters (in):	Frlf_Ctrlldx	Index of FlexRay CC within the context of the FlexRay Interface.	
Parameters (inout):	None		
Parameters (out):		Address where the current rate correction value shall be stored.	
	Frlf_OffsetCorrectionPtr	Address where the current offset correction value shall be stored.	
Return value:	Std_ReturnType	E_OK: API call finished successfully. E_NOT_OK: API call aborted due to errors.	
Description:	Wraps the FlexRay Driver API function Fr_GetClockCorrection () and gets the current clock correction values.		

I()

[SWS_Frlf_05414] [The function Frlf_GetClockCorrection shall be pre compile time configurable ON/OFF by the configuration parameter FrlfGetClockCorrectionSupport (derived from configuration parameter FrlfGetClockCorrectionSupport, see ECUC_Frlf_06106)] ()

[SWS_Frlf_05711] [If development error detection for the Frlf module is enabled: if the function Frlf_GetClockCorrection is called before the Frlf was initialized successfully, the function Frlf_GetClockCorrection shall raise the development error FRIF_E_NOT_INITIALIZED and return E_NOT_OK.] ()

[SWS_Frlf_05712] [If development error detection for the Frlf module is enabled: the function Frlf_GetClockCorrection shall check the parameter Frlf_Ctrlldx for being valid. If Frlf_Ctrlldx is invalid, the function Frlf_GetClockCorrection shall raise the development error FRIF_E_INV_CTRL_IDX and return E_NOT_OK.] ()

8.4.4 Frlf_GetSyncFrameList

[SWS Frlf 05072] [

SWS_Frit_05072		
Service name:	FrIf_GetSyncFrameList	
Syntax:	Std_ReturnType FrIf	
	uint8 FrIf_Ctrl	
	uint8 FrIf_ListSize,	
	uint16* FrIf_ChannelAEvenListPtr,	
	_	annelBEvenListPtr,
	uint16* FrIf_ChannelAOddListPtr,	
	uint16* FrIf_ChannelBOddListPtr	
Service ID[hex]:	0x2a	
Sync/Async:	Synchronous	
Reentrancy:	Non Reentrant for the san	ne device
recitianoy.	Frlf Ctrlldx	Index of FlexRay CC within the context of the FlexRay
	I III_Ottildx	Interface.
	Frlf_ListSize	Size of the arrays passed via parameters:
Parameters (in):		Frlf_ChannelAEvenListPtr Frlf_ChannelBEvenListPtr
		Frlf_ChannelAOddListPtr Frlf_ChannelBOddListPtr.
		The service must ensure to not write more entries into
		those arrays than granted by this parameter.
Parameters	None	
(inout):		T
	Frlf_ChannelAEvenListPti	Address the list of syncframes on channel A within the
		even communication cycle is written to. The exact
		number of elements written to the list is limited by
		parameter Frlf_ListSize. Unused list elements are filled
		with the value '0' to indicate that no more syncframe has
	E.I. Ohmod DE and St.D.	been seen.
	Frif_ChannelBEvenListPti	Address the list of syncframes on channel B within the
		even communication cycle is written to. The exact number of elements written to the list is limited by
		parameter FrIf_ListSize. Unused list elements are filled
		with the value '0' to indicate that no more syncframe has
		been seen.
Parameters (out):	Frlf_ChannelAOddListPtr	Address the list of syncframes on channel A within the
	I III_GIIaIIIIGI/ (Gaazioti ti	odd communication cycle is written to. The exact
		number of elements written to the list is limited by
		parameter Frlf_ListSize. Unused list elements are filled
		with the value $\overline{}$ 0' to indicate that no more syncframe has
		been seen.
	Frlf_ChannelBOddListPtr	Address the list of syncframes on channel B within the
		odd communication cycle is written to. The exact
		number of elements written to the list is limited by
		parameter Frlf_ListSize. Unused list elements are filled
		with the value '0' to indicate that no more syncframe has
		been seen.
Return value:	Std_ReturnType	E_OK: API call finished successfully. E_NOT_OK: API
	M	call aborted due to errors.
Description:		API function Fr_GetSyncFrameList and gets a list of
	syncframes received or transmitted on channel A and channel B via the even	
	odd communication cycle.	

] ()

[SWS_Frlf_05415] The function Frlf_GetSyncFrameList shall be pre compile time configurable ON/OFF by the configuration parameter FrlfGetSyncFrameListSupport (derived from configuration parameter FrlfGetSyncFrameListSupport, see ECUC_Frlf_06107)] ()

[SWS_Frlf_05715] [If development error detection for the Frlf module is enabled: if the function Frlf_GetSyncFrameList is called before the Fr was initialized successfully, the function Frlf_GetSyncFrameList shall raise the development error FRIF E NOT INITIALIZED and return E NOT OK. | ()

[SWS_Frlf_05716] [If development error detection for the Frlf module is enabled: the function Frlf_GetSyncFrameList shall check the parameter Frlf_Ctrlldx for being valid. If Frlf_Ctrlldx is invalid, the function Frlf_GetSyncFrameList shall raise the development error FRIF_E_INV_CTRL_IDX and return E_NOT_OK.] ()

8.4.5 Frlf_GetNumOfStartupFrames

ISWS Frlf 050731

<u> 3883_FIII_0307</u>	<u> </u>	
Service name:	Frlf_GetNumOfStartupFrames	
Syntax:	<pre>Std_ReturnType FrIf_GetNumOfStartupFrames(uint8 FrIf_CtrlIdx, uint8* FrIf_NumOfStartupFramesPtr)</pre>	
Service ID[hex]:	0x34	
Sync/Async:	Synchronous	
Reentrancy:	Non Reentrant for the same dev	vice
	Frlf_Ctrlldx	Index of FlexRay CC within the context of the FlexRay Interface.
Parameters (in):	Frlf_NumOfStartupFramesPtr	Address where the number of startup frames seen within the last even/odd cycle pair shall be stored.
Parameters (inout):	None	
Parameters (out):	None	
Return value:	Std_ReturnType	E_OK: API call finished successfully. E_NOT_OK: API call aborted due to errors.
Description:	Wraps the FlexRay Driver API function Fr_GetNumOfStartupFrames and gets a list of the the current number of startup frames seen on the cluster. See variable vStartupPairs of [12] for details.	

I()

[SWS_Frlf_05416] [The function Frlf_GetNumOfStartupFrames shall be pre compile time configurable ON/OFF by the configuration parameter FrlfGetNumOfStartupFramesSupport (derived from configuration parameter FrlfGetNumOfStartupFramesSupport, see ECUC_Frlf_06104)] ()

[SWS_FrIf_05721] [If development error detection for the FrIf module is enabled: if the function FrIf_GetNumOfStartupFrames is called before the FrIf was initialized

successfully, the function Frlf_GetNumOfStartupFrames shall raise the development error FRIF_E_NOT_INITIALIZED and return E_NOT_OK.] ()

If FrIf_Ctrlldx is invalid, the function FrIf_GetWakeupRxStatus shall raise the development error FRIF_E_INV_CTRL_IDX and return E_NOT_OK.] ()

8.4.7 Frlf CancelTransmit

[SWS_Frlf_05070] [

Service name:	Frlf_CancelTrans	FrIf_CancelTransmit	
Syntax:	<pre>Std_ReturnType FrIf_CancelTransmit(PduIdType TxPduId)</pre>		
Service ID[hex]:	0x4a		
Sync/Async:	Synchronous		
Reentrancy:	Reentrant for diffe	Reentrant for different Pdulds. Non reentrant for the same Pduld.	
Parameters (in):	TxPduld	Identification of the PDU to be cancelled.	
Parameters (inout):	None		
Parameters (out):	None		
Return value:	Std_ReturnType	E_OK: Cancellation was executed successfully by the destination module. E_NOT_OK: Cancellation was rejected by the destination module.	
Description:	Requests cancellation of an ongoing transmission of a PDU in a lower layer communication module.		

I()

[SWS_Frlf_05713] [The function Frlf_CancelTransmit shall be pre compile time configurable ON/OFF by the configuration parameter FrlfCancelTransmitSupport (derived from configuration parameter FrlfCancelTransmitSupport, see ECUC_Frlf_00002)] ()

[SWS_FrIf_05703] [If development error detection for the FrIf module is enabled: if the function FrIf_CancelTransmit is called before the FrIf was initialized successfully, the function FrIf_CancelTransmit shall raise the development error FRIF E NOT INITIALIZED and return E NOT OK. | ()

[SWS_FrIf_05704] [If development error detection for the FrIf module is enabled: the function FrIf_CancelTransmit shall check the parameter TxPduId for being valid. If TxPduId is invalid, the function FrIf_CancelTransmit shall raise the development error FRIF_E_INV_TXPDUID and return E_NOT_OK.] ()

[SWS Frif 05705] [For Transmit Cancellation, the following steps are performed:

- 1. Decrement TrigTxCounter for the IPDU that shall be canceled.
- 2. If TxConfCounter > 0 for this PDU, contine with step 3). Else, stop here.
- 3. Call FlexRay Driver's API function Fr CancelTxLPdu():
 - a. Fr Ctrlldx is derived according to the indexing scheme descibed in 7.2
 - b. Fr_LPduldx is set to the configured L-PDU buffer index [Configuration Parameter FrlfLPduldx, see Frlf06058] associated with the Communication Operation.
- 4. Increment <u>TrigTxCounter</u> (limited by FrlfCounterLimit) for all other I-PDUs within that L-PDU that have a TxConfCounter > 0.

- 5. Decrement TxConfCounter for all other I-PDUs within that L-PDU that have a TxConfCounter > 0.
- 6. Decrement the TxConfCounter for the IPDU that has been initiated by the CancelTransmit API call.] ()

8.4.8 Frlf_DisableLPdu

[SWS Frlf 05710] [

0005_F111_0371	, - '	
Service name:	Frlf_DisableLPdu	
Syntax:	Std_ReturnType FrIf_DisableLPdu(
	uint8 FrIf_(CtrlIdx,
	uint16 FrIf	LPduIdx
)	
Service ID[hex]:	0x28	
Sync/Async:	Synchronous	
Reentrancy:	Non Reentrant for the	e same device
	Frlf_Ctrlldx	Index of FlexRay CC within the context of the FlexRay
Parameters (in):		Interface.
, ,	Frlf_LPduldx	This index is used to uniquely identify a FlexRay frame
Parameters	None	
(inout):		
Parameters (out):	None	
Detum value	Std_ReturnType	E_OK: API call finished successfully.
Return value:		E_NOT_OK: API call aborted due to errors.
Description:	Wraps the FlexRay Driver Function Fr_DisableLPdu. It disables the hardware	
_	resource of an LPdu for transmission/reception.	
/\		

] ()

[SWS_Frlf_05418] [The function Frlf_DisableLPdu shall be pre compile time configurable ON/OFF by the configuration parameter FrlfDisableLPduSupport (derived from configuration parameter FrlfDisableLPduSupport, see ECUC_Frlf_06110)] ()

[SWS_FrIf_05756] [If parameter FrIf_Ctrlldx of FrIf_DisableTransceiverBranch has an invalid value and if development error detection is enabled (i.e. FrIfDevErrorDetect equals ON), the function FrIf_DisableTransceiverBranch shall report development error code FRIF_E_INV_CTRL_IDX to the Det_ReportError service of the DET module. | ()

[SWS_Frlf_05243] [If parameter Frlf_Chnlldx of Frlf_DisableTransceiverBranch has an invalid value and if development error detection is enabled (i.e. FrlfDevErrorDetect equals ON), the function Frlf_DisableTransceiverBranch shall report development error code FRIF_E_INV_CHNL_IDX to the Det_ReportError service of the DET module. | ()

[SWS_FrIf_05305] [The function FrIf_DisableTransceiverBranch shall wrap the FlexRay Transceiver Driver API function FrIf_DisableTransceiverBranch by:

1)Translating (based on static Frlf module configuration) the tuple (FlexRay CC index Frlf_Ctrlldx | FlexRay Channel index Frlf_Chnlldx) into a tuple (FlexRay Transceiver Driver | Driver-specific Transceiver index FrTrcv Trcvldx)

- 2) Setting parameter: FrTrcv_Branchldx to Frlf_Branchldx
- 3) Calling FrTrcv_DisableTransceiverBranch() of the determined FlexRay Driver module with the parameters determined as described above.] ()

[SWS_FrIf_05308] [Caveats of FrIf_DisableTransceiverBranch: The FlexRay Interface module has to be initialized with a call of FrIf_Init() before this API service may be called, see SWS_FrIf_05003. | ()

8.4.12 Frlf_ReconfigLPdu

[SWS_Frlf_05048] [

Service name:	Frlf_ReconfigLPdu	
Syntax:	Std_ReturnType FrIf_ReconfigLPdu(uint8 FrIf_CtrlIdx, uint16 FrIf_LPduIdx, uint16 FrIf_FrameId, Fr_ChannelType FrIf_ChnlIdx, uint8 FrIf_CycleRepetition, uint8 FrIf_CycleOffset, uint8 FrIf_PayloadLength, uint16 FrIf_HeaderCRC	
Service ID[hex]:	0	
Sync/Async:	Synchronous	
Reentrancy:	Non Reentrant	
Parameters (in):	FrIf_CycleOffset FrIf_PayloadLength FrIf_HeaderCRC	Index of FlexRay CC within the context of the FlexRay Driver. This index is used to uniquely identify a FlexRay frame. FlexRay Frame ID the Frlf_LPdu shall be configured to. FlexRay Channel the Frlf_LPdu shall be configured to. Cycle Repetition part of the cycle filter mechanism Frlf_LPdu shall be configured to. Cycle Offset part of the cycle filter mechanism Frlf_LPdu shall be configured to. Payloadlength in units of bytes the Frlf_LPduldx shall be configured to. Header CRC the Frlf_LPdu shall be configured to.
Parameters (inout):	None	
Parameters (out):	None	
Return value:	Std_ReturnType	E_OK: API call finished successfully. E_NOT_OK: API call aborted due to errors.
Description:	Calls the FlexRay Driver's API Fr_ReconfigLPdu. The enum value "FR_CHANNEL_AB" shall not be used.	

]()

[SWS_Frlf_05422] [The function Frlf_ReconfigLPdu shall be pre compile time configurable ON/OFF by the configuration parameter FrlfReconfigLPduSupport (derived from configuration parameter FrlfReconfigLPduSupport, see ECUC_Frlf_06109)] ()

Service ID[hex]:	0x01	
Sync/Async:	Synchronous	
Reentrancy:	Reentrant	
Parameters (in):	None	
Parameters	None	
(inout):		
Parameters (out):		inter to a memory location where the FlexRay Interface
rarameters (out).	ver	rsion information shall be stored.
Return value:	void	
Description:	Returns the version information of this module.	

(SRS_BSW_00407, SRS_BSW_00411)

[SWS_FrIf_05424] [The function FrIf_GetVersionInfo shall be pre compile time configurable ON/OFF by the configuration parameter FrIfVersionInfoApi (derived from configuration parameter FrIfVersionInfoApi, see ECUC_FrIf_06083)] ()

[SWS_FrIf_05151] [If parameter FrIf_VersionInfoPtr of FrIf_GetVersionInfo equals NULL_PTR and if development error detection is enabled (i.e. FrIfDevErrorDetect equals ON), the function FrIf_GetVersionInfo shall report development error code FRIF_E_PARAM_POINTER to the Det_ReportError service of the DET module.] ()

8.4.15 Frlf_ReadCCConfig

[SWS Frlf 05313] [

Service name:	Frlf_ReadCCConfig
Syntax:	<pre>Std_ReturnType FrIf_ReadCCConfig(uint8 FrIf_CtrlIdx, uint8 FrIf_ConfigParamIdx, uint32* FrIf_ConfigParamValuePtr)</pre>
Service ID[hex]:	0x3b

Sync/Async:	Synchronous	
Reentrancy:	Non Reentrant for the same FlexRay CC, reentrant for different FlexRay CCs	
Parameters (in)	Frlf_Ctrlldx	Index of the FlexRay CC to address.
	Frlf_ConfigParamIdx	Index of the configuration parameter to read.
Parameters	None	
(inout):		
Parameters (out):	Frlf_ConfigParamValuePtr	Pointer to a memory location where output value will be
` '		stored.
Return value:	Std_ReturnType	E_OK: The call of the FlexRay Driver's API service has returned E_OK.
		E_NOT_OK: The call of the FlexRay Driver's API
		service has returned E_NOT_OK, or an error has been
		detected in development mode.
Description:	Wraps the FlexRay Driver	API function Fr_ReadCCConfig().

] ()

[SWS_FrIf_05314] [The function FrIf_ReadCCConfig wraps the FlexRay Driver API Fr_ReadCCConfig function.] ()

[SWS_FrIf_05315] [If parameter FrIf_Ctrlldx of FrIf_ReadCCConfig has an invalid value and if development error detection is enabled (i.e. FrIfDevErrorDetect equals ON), the function FrIf_ReadCCConfig shall report development error code FRIF_E_INV_CTRL_IDX to the Det_ReportError service of the DET module.] ()

8.5 Interrupt Service Routines

8.5.1 Frlf JobListExec <Clstldx>

-2) Calling FrTrcv_CheckWakeupByTransceiver() of the determined FlexRay Driver module with the parameters determined as described above.] ()

[SWS_Frlf_05277] [Caveats of Frlf_CheckWakeupByTransceiver: The FlexRay Interface module has to be initialized with a call of Frlf_Init() before this API service may be called, see SWS_Frlf_05003.] ()

8.7 Scheduled Functions

8.7.1 Frlf_MainFunction_<Clstldx>

[SWS_Frlf_05042] [

<u>[0110_1111_000 11</u>	-2
Service name:	FrIf_MainFunction_ <clstidx></clstidx>
Syntax:	<pre>void FrIf_MainFunction_<clstidx>(void)</clstidx></pre>
Service ID[hex]:	0x27
Description:	This function will be called cyclically by a task body provided by the BSW Scheduler.

()

Note:

This cyclically executed API service of the FlexRay Interface serves the following purposes:

- Program the absolute timer interrupt in order to start the execution of Frlf_JobListExec_<Clstldx>() if the CC does not support asynchronous buffer access.
- Monitoring the proper (in time) execution of the Frlf_JobListExec_<Clstldx>() and resynchronize the Joblist if necessary.

Please refere to chapter 7.3 for a detailed description.

Pre condition: The function Frlf_MainFunction_<Clstldx> is cyclically called from a task body provided by the BSW Scheduler module.

Since the duration of a FlexRay Cycle may be different for two Clusters of an ECU, the calling period (parameter FrlfMainFunctionPeriod) of this API service shall be configurable independently for each Cluster at system configuration time.

The parameter FrlfMainFunctionPeriod determines for each FlexRay cluster of a FlexRay Interface module the calling period, which is provided for the BSW scheduler module.

[SWS_FrIf_05278] [The function FrIf_MainFunction_<ClstIdx> shall exist once per FlexRay Cluster of a FlexRay Interface module.] ()

[SWS_FrIf_05279] [The function name of each instance of FrIf_MainFunction_<ClstIdx> shall contain the index of the respective FlexRay Cluster (ClstIdx).] ()

[SWS_FrIf_05280] [Caveats of FrIf_MainFunction_<ClstIdx>: The FlexRay Interface has to be initialized with a call of FrIf_Init() before this API service may be called, see SWS FrIf 05003. | ()

8.8 Expected Interfaces

This chapter lists all API services required from other **BSW** modules.

8.8.1 Mandatory Interfaces

This chapter defines all API services which are required from other <u>BSW</u> modules to fulfill the core functionality of the FlexRay Interface.

[SWS_Frlf_05043] [

API function	Description
Fr_AbortCommunication	Invokes the CC CHI command 'FREEZE'.
Fr_AckAbsoluteTimerIRQ	Resets the interrupt condition of an absolute timer.
Fr_AllowColdstart	Invokes the CC CHI command 'ALLOW_COLDSTART'.
Fr_CancelAbsoluteTimer	Stops an absolute timer.
Fr_CheckTxLPduStatus	Checks the transmit status of the LSdu.
Fr_ControllerInit	Initialzes a FlexRay CC.
Fr_DisableAbsoluteTimerIRQ	Disables the interrupt line of an absolute timer.
Fr_EnableAbsoluteTimerIRQ	Enables the interrupt line of an absolute timer.
Fr_GetAbsoluteTimerIRQStatus	Gets IRQ status of an absolute timer.
Fr_GetGlobalTime	Gets the current global FlexRay time.
Fr_GetPOCStatus	Gets the POC status.
Fr_HaltCommunication	Invokes the CC CHI command 'DEFERRED_HALT'.
Fr_ReceiveRxLPdu	Receives data from the FlexRay network.
Fr_SendWUP	Invokes the CC CHI command 'WAKEUP'.
Fr_SetAbsoluteTimer	Sets the absolute FlexRay timer.
Fr_SetWakeupChannel	Sets a wakeup channel.
Fr_StartCommunication	Starts communication.
Fr_TransmitTxLPdu	Transmits data on the FlexRay network.
FrTrcv_CheckWakeupByTransceiver	
FrTrcv_ClearTransceiverWakeup	This function clears a pending wake up event.
FrTrcv_GetTransceiverMode	This function returns the actual state of the transceiver.
FrTrcv_GetTransceiverWUReason	This function returns the wakeup reason.
FrTrcv_SetTransceiverMode	This service sets the transceiver mode.

8.8.2 Optional Interfaces

This chapter defines all API services which are required from other <u>BSW</u> modules to fulfill an optional functionality of the FlexRay Interface

[SWS_Frlf_05044] [

API function	Description
Dem_SetEventStatus	Called by SW-Cs or BSW modules to report monitor status
	information to the Dem. BSW modules calling Dem_SetEventStatus
	can safely ignore the return value.
Det_ReportError	Service to report development errors.
Fr_AllSlots	Invokes the CC CHI command 'ALL_SLOTS'.
Fr_CancelTxLPdu	Cancels the already pending transmission of a LPdu contained in a
_	controllers physical transmit resource (e.g. message buffer).
Fr_DisableLPdu	Disables the hardware resource of a LPdu for
	transmission/reception.
Fr_GetChannelStatus	Gets the channel status information.
Fr_GetClockCorrection	Gets the current clock correction values.
	See variables vInterimRateCorrection and vInterimOffsetCorrection
	of [12] for details.
Fr_GetNmVector	Gets the network management vector of the last communication
	cycle.
Fr_GetNumOfStartupFrames	Gets the current number of startup frames seen on the cluster.
	See variable vStartupPairs of [12] for details.
Fr_GetSyncFrameList	Gets a list of syncframes received or transmitted on channel A and
	channel B via the even and odd communication cycle.
	See variables vsSyncldListA and vsSyncldListB of [12] for details.
Fr_GetWakeupRxStatus	Gets the wakeup received information from the FlexRay controller.
Fr_PrepareLPdu	Prepares a LPdu.
Fr_ReadCCConfig	Reads a FlexRay protocol configuration parameter for a particular
	FlexRay controller out of the module's configuration.
Fr_ReconfigLPdu	Reconfigures a given LPdu according to the parameters (Frameld,
	Channel, CycleRepetition, CycleOffset, PayloadLength,
	HeaderCRC) at runtime.
FrArTp_RxIndication	Indication of a received PDU from a lower layer communication
	interface module.
FrArTp_TriggerTransmit	Within this API, the upper layer module (called module) shall check
	whether the available data fits into the buffer size reported by
	PduInfoPtr->SduLength.
	If it fits, it shall copy its data into the buffer provided by PduInfoPtr-
	>SduDataPtr and update the length of the actual copied data in
	PduInfoPtr->SduLength. If not, it returns E_NOT_OK without changing PduInfoPtr.
ErArTa TyConfirmation	The lower layer communication interface module confirms the
FrArTp_TxConfirmation	transmission of a PDU, or the failure to transmit a PDU.
FrNm_RxIndication	Indication of a received PDU from a lower layer communication
i min_rxmacation	interface module.
FrNm_TriggerTransmit	Within this API, the upper layer module (called module) shall check
	whether the available data fits into the buffer size reported by
	PduInfoPtr->SduLength.
	If it fits, it shall copy its data into the buffer provided by PduInfoPtr-
	>SduDataPtr and update the length of the actual copied data in
	PduInfoPtr->SduLength.
	If not, it returns E_NOT_OK without changing PduInfoPtr.

FrNm_TxConfirmation	The lower layer communication interface module confirms the transmission of a PDU, or the failure to transmit a PDU.
FrTp_RxIndication	Indication of a received PDU from a lower layer communication interface module.
FrTp_TriggerTransmit	Within this API, the upper layer module (called module) shall check whether the available data fits into the buffer size reported by PduInfoPtr->SduLength. If it fits, it shall copy its data into the buffer provided by PduInfoPtr->SduDataPtr and update the length of the actual copied data in PduInfoPtr->SduLength. If not, it returns E_NOT_OK without changing PduInfoPtr.
FrTp_TxConfirmation	The lower layer communication interface module confirms the transmission of a PDU, or the failure to transmit a PDU.
FrTrcv_DisableTransceiverBranch	This function disables the specified branch on the addressed (active star) transceiver.
FrTrcv_EnableTransceiverBranch	This function enables the specified branch on the addressed (active star) transceiver.
FrTrcv_GetTransceiverError	All mandatory errors defined by the FlexRay EPL [5] which are supported by the FlexRay transceiver hardware can be accessed via this API:In addition to errors on the physical layer and local to the ECU hardware, a global error flag is provided.
PduR_FrlfRxIndication	Indication of a received PDU from a lower layer communication interface module.
PduR_FrlfTriggerTransmit	Within this API, the upper layer module (called module) shall check whether the available data fits into the buffer size reported by PduInfoPtr->SduLength. If it fits, it shall copy its data into the buffer provided by PduInfoPtr->SduDataPtr and update the length of the actual copied data in PduInfoPtr->SduLength. If not, it returns E_NOT_OK without changing PduInfoPtr.
PduR_FrlfTxConfirmation	The lower layer communication interface module confirms the transmission of a PDU, or the failure to transmit a PDU.
Xcp_FrlfRxIndication	Indication of a received PDU from a lower layer communication interface module.
Xcp_FrlfTriggerTransmit	Within this API, the upper layer module (called module) shall check whether the available data fits into the buffer size reported by PduInfoPtr->SduLength. If it fits, it shall copy its data into the buffer provided by PduInfoPtr->SduDataPtr and update the length of the actual copied data in PduInfoPtr->SduLength. If not, it returns E_NOT_OK without changing PduInfoPtr.
Xcp_FrlfTxConfirmation	The lower layer communication interface module confirms the transmission of a PDU, or the failure to transmit a PDU.

] ()

8.8.3 Configurable Interfaces

This chapter lists all interfaces where the target API service of any upper layer, which require one or more of these mentioned interfaces to be called has to be set up by static configuration of the FlexRay Interface. The target function is usually a call-back function. The names of these kinds of interfaces are not fixed because they are configurable.

These call-back services are specified and implemented in the upper layer BSW modules, which use the FlexRay Interface according to [2]. The specific call-back notification is specified in the corresponding AUTOSAR SWS document (see chapter 3).

In addition to upper layer AUTOSAR BSW modules, the Frlf can, with the functionality described within this specification, also support other non-AUTOSAR upper layer software modules (CDs), provided that these modules interact with the Frlf in the same manner as the upper layer AUTOSAR BSW modules. In particular, those non-AUTOSAR modules need to provide APIs as described in this chapter.

8.8.3.1 <UL_RxIndication>

[SWS_Frlf_05045] [

Service name:	<user_rxindication></user_rxindication>
Syntax:	<pre>void <user_rxindication>(PduIdType RxPduId,</user_rxindication></pre>

	const PduInfoType* PduInfoPtr	
)	
Sync/Async:	Synchronous	
Reentrancy:	Reentrant for different Pdulds. Non reentrant for the same Pduld.	
	RxPduld ID of the received PDU.	
Parameters (in):	PduInfoPtr Contains the length (SduLength) of the received PDU, a pointer to a buffer (SduDataPtr) containing the PDU, and the MetaData related to this PDU.	
Parameters	None	
(inout):		
Parameters (out):	None	
Return value:	None	
Description:	Indication of a received PDU from a lower layer communication interface module.	

] ()

Note:

During the execution of this API service, the upper layer BSW module that is the final recipient of this PDU is expected to retrieve (i.e. copy) the SDU (i.e. the payload of the PDU) by means of the pointer PduInfoPtr which contains the received data address and received data length.

Caveats of <UL_RxIndication>: This API service is called during the execution of the FlexRay Job List Execution Function.

8.8.3.2 <UL_TxConfirmation>

[SWS_Frlf_05046] [

	<u> </u>	
Service name:	<user_txconfirmation></user_txconfirmation>	
Syntax:	<pre>void <user_txconfirmation>(PduIdType TxPduId, Std_ReturnType result)</user_txconfirmation></pre>	
Sync/Async:	Synchronous	
Reentrancy:	Reentrant for different Pdulds. Non reentrant for the same Pduld.	
	TxPduld	ID of the PDU that has been transmitted.
Parameters (in):		E_OK: The PDU was transmitted. E_NOT_OK: Transmission of the PDU failed.
Parameters (inout):	None	
Parameters (out):	None	
Return value:	None	
Description:	The lower layer communication interface module confirms the transmission of a PDU, or the failure to transmit a PDU.	

()

Caveats of <UL_TxConfirmation>: This API service is called during the execution of the FlexRay Job List Execution Function.

8.8.3.3 <UL_TriggerTransmit>

ISWS Frlf 050471

	4
Service name:	<user_triggertransmit></user_triggertransmit>

Syntax:	Std_ReturnType <user_triggertransmit>(PduIdType TxPduId,</user_triggertransmit>		
	PduInfoType* PduInfoPtr)		
Sync/Async:	Synchronous		
Reentrancy:	Reentrant for different Pdulds. Non reentrant for the same Pduld.		
Parameters (in):	TxPduld	ID of the SDU that is requested to be transmitted.	
Parameters (inout):	PduInfoPtr	Contains a pointer to a buffer (SduDataPtr) to where the SDU data shall be copied, and the available buffer size in SduLengh. On return, the service will indicate the length of the copied SDU data in SduLength.	
Parameters (out):	None		
Return value:		E_OK: SDU has been copied and SduLength indicates the number of copied bytes. E_NOT_OK: No SDU data has been copied. PduInfoPtr must not be used since it may contain a NULL pointer or point to invalid data.	
Description:	Within this API, the upper layer module (called module) shall check whether the available data fits into the buffer size reported by PduInfoPtr->SduLength. If it fits, it shall copy its data into the buffer provided by PduInfoPtr->SduDataPtr and update the length of the actual copied data in PduInfoPtr->SduLength. If not, it returns E_NOT_OK without changing PduInfoPtr.

Caveats of <Free_Op_B>: This API service is called during the execution of the FlexRay Job List Execution Function.

8.8.3.6 < UL_TxConflictNotification>

[SWS_Frlf_91001] [

Service name:	<ul_txconflictnotification></ul_txconflictnotification>		
Syntax:	<pre>void <ul_txconflictnotification>(uint8 FrIf_CtrlIdx, uint16 FrIf_LPduIdx)</ul_txconflictnotification></pre>		
Sync/Async:	Synchronous		
Reentrancy:	Reentrant for different Frlf_LPduldx. Non reentrant for the same Frlf_LPduldx.		
Parameters (in):	Frlf_Ctrlldx	ID of the addressed FlexRay CC	
	Frlf_LPduldx	ID of the transmitted FlexRay frame	
Parameters (inout):	None		
Parameters (out):	None		
Return value:	None		
Description:	Notification in case a TxConflict has been detected.		

] ()

9 Sequence Diagrams

The sequence diagrams in this chapter show the basic operations carried out in a FlexRay Cluster's FlexRay Job List Execution Function when executing the various Communication Operations. They also show the interaction of the Frlf with the upper layer BSW module and with the underlying FlexRay Driver.

Please note that the sequence diagrams are an extension for illustrational purposes to ease understanding of the specification.

9.1 Data Transmission

9.1.1 TransmitWithImmediateBufferAccess

10 Configuration Specification

This chapter defines configuration parameters and their clustering into containers. Chapter 10.1 gives information to help understanding the subsequent chapters. Chapter 10.2 specifies the structure (containers) and the parameters of the FlexRay Interface.

Chapter 9.3 specifies published information of the FlexRay Interface.

10.1 How to Read this Chapter

For details refer to the chapter 10.1 "Introduction to configuration specification" in SWS_BSWGeneral.

10.2 Containers and Configuration Parameters

The following chapters summarize all configuration parameters. The detailed meanings of the parameters are described in chapter 7 and chapter 8

The listed configuration items can be derived from a network description database, which is based on the EcuConfigurationTemplate. The configuration tool has to extract all information to configure the Frlf module.

Note:

The configuration tool must check the consistency of the configuration at configuration time.

Note:

These dependencies between FlexRay Interface and FlexRay Driver configuration must be provided at configuration time by the configuration tools.

10.2.1 Frlf

SWS Item	ECUC_Frlf_06087:
Module Name	FrIf
Module Description	Configuration of the FrIf (FlexRay Interface) module.
Post-Build Variant Support	true
Supported Config Variants	VARIANT-LINK-TIME, VARIANT-POST-BUILD, VARIANT-PRE-COMPILE

Included Containers				
Container Name	Multiplicity	Scope / Dependency		
FrlfConfig		This container contains the configuration parameters and sub containers of the AUTOSAR FrIf module.		
FrlfGeneral		This container contains the general configuration parameters of the FlexRay Interface.		

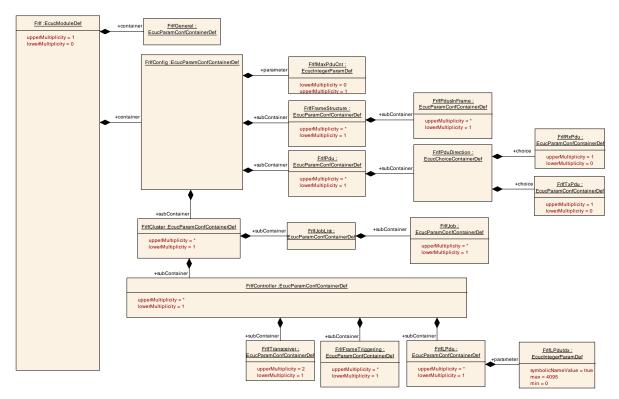

Figure 10-1: FlexRay Interface Module

10.2.2 FrlfGeneral

SWS Item	ECUC_Frlf_05360:
Container Name	FrlfGeneral
II Jescrintion	This container contains the general configuration parameters of the FlexRay Interface.
Configuration Parameters	

SWS Item	ECUC_Frlf_06112:		
Name	FrlfAbsTimerldx		
Description	Maximum number of support	ted ab	solute timers.

10.2.19 FrlfFrameTriggeringDemEventParameterRefs

SWS Item	ECUC_Frlf_06099:			
Container Name	FrlfFrameTriggeringDemEventParameterRefs			
Description	Container for the references to DemEventParameter elements which shall be invoked using the API Dem_SetEventStatus in case the corresponding error occurs. The EventId is taken from the referenced DemEventParameter's DemEventId symbolic value. The standardized errors are provided in this container and can be extended by vendor-specific error references.			
Configuration Parameters				

SWS Item	ECUC_FrIf_00009:				
Name	FRIF_E_LPDU_SLOTSTATUS				
Description	Reference to DEM event Id that is reported when FlexRay driver module detects slot errors. If this parameter is not configured, no event reporting				
	happens.				
Multiplicity	01				
Туре	Symbolic name reference to	[Den	nEventParameter]		
Post-Build Variant Multiplicity	true
